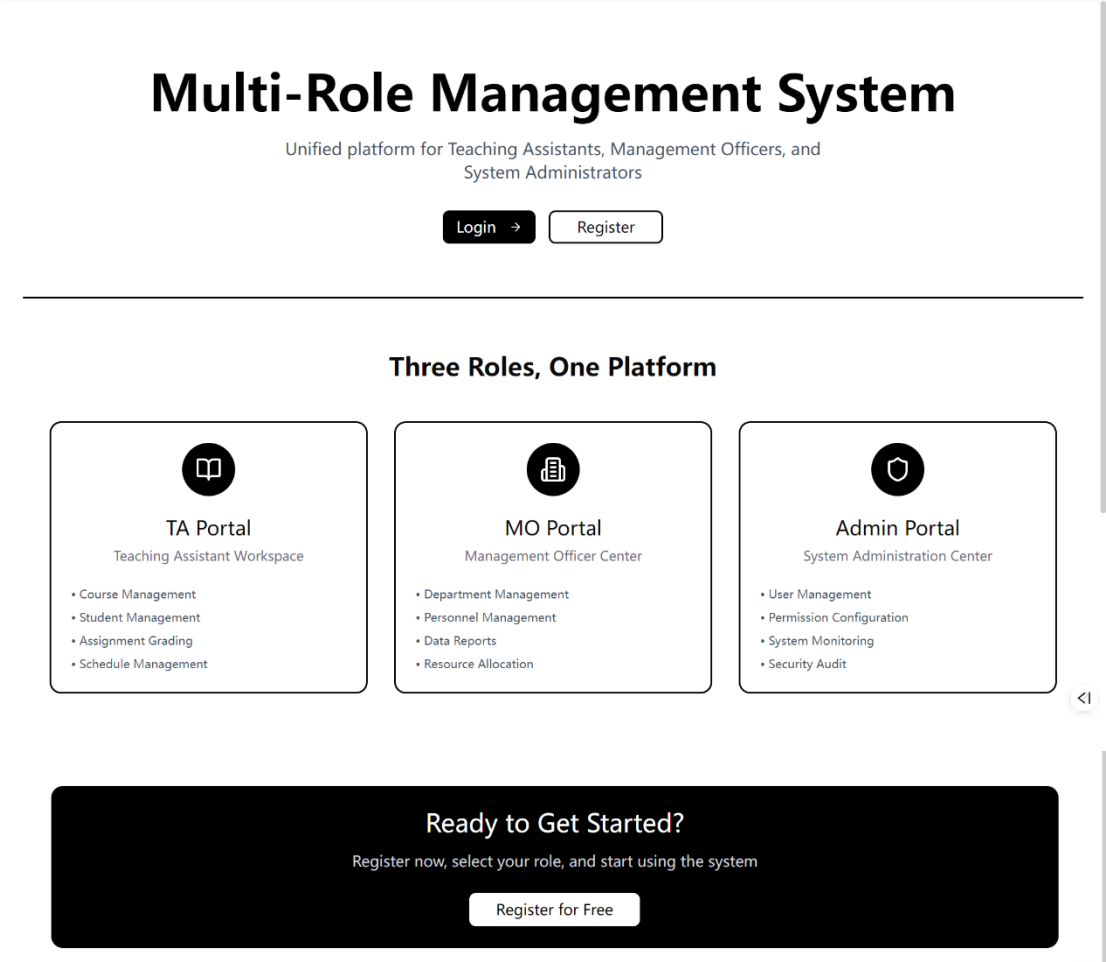
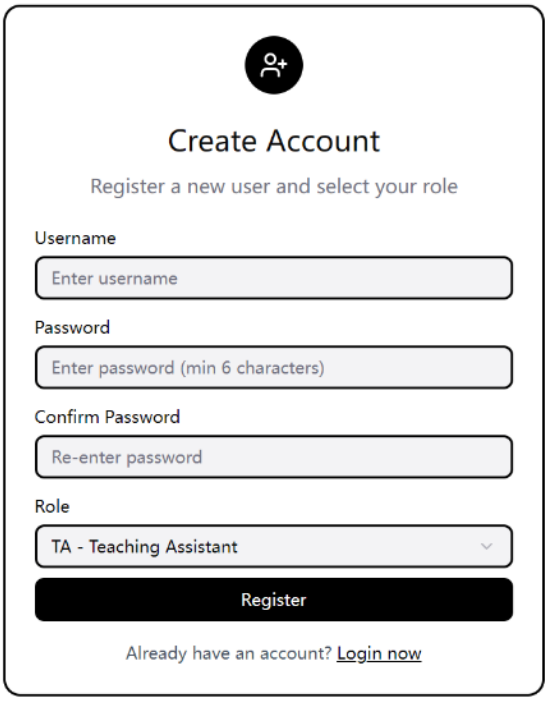
Authentication & Navigation module

(1) Homepage & Main Entry



The Authentication & Navigation module serves as the entry point of the entire system. Upon launching the application, the user is presented with the main interface. The homepage displays the "Multi-Role Management System" and offers two primary operational branches: Login and Register. Additionally, the page outlines the three core user roles supported by the platform: Teaching Assistants (TA), Management Officers (MO), and Administrators (Admin). The user must select an option here to proceed with the workflow.

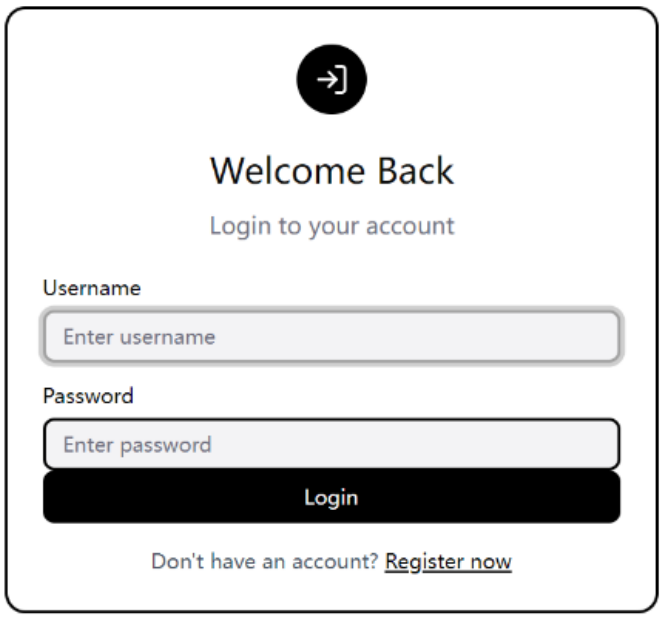
(2) Registration Workflow



When a new user selects "Register", the system directs them to the "Create Account" interface. In this form, the user is required to enter a username, set a password containing a minimum of 6 characters, and re-enter the password for confirmation. A crucial step in this process is role selection; the user must specify their identity (TA, MO, or Admin) via a dropdown menu. After clicking "Register", the system validates the uniqueness of the username and the validity of the password. If the validation is successful, the account is officially created ; if it fails, the system displays an error message.

(3) **Login Workflow**

For existing users who select "Login", the system displays the "Welcome Back" interface. The user inputs their registered username and password, then clicks the "Login" button to submit. The system then verifies these credentials. If the provided information is incorrect, an error message is shown on the screen.



(4) Role-Based Navigation

If the login authentication is successful, the system triggers a role-based navigation logic, redirecting the user to their designated workspace.

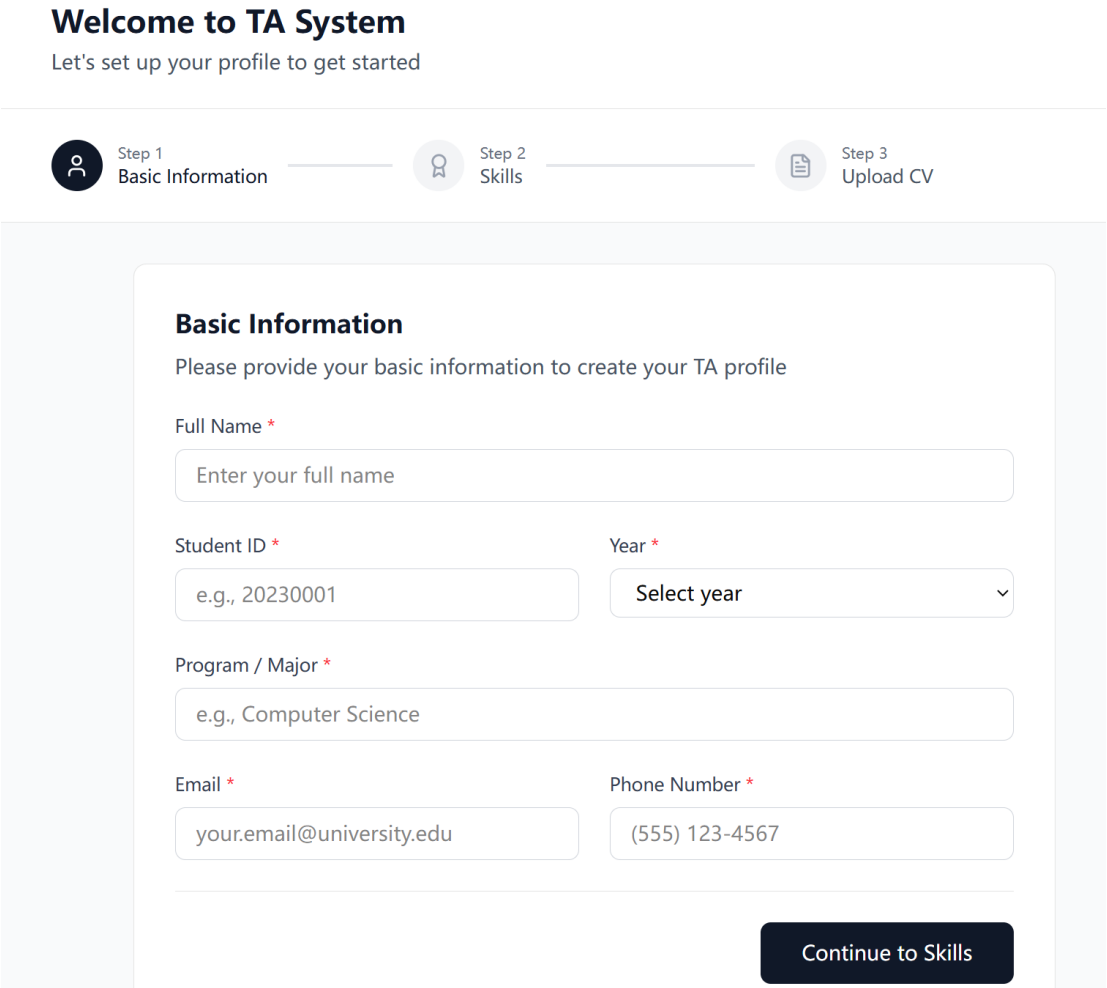
- TAs are routed to the TA Portal to handle tasks such as course management, grading, and scheduling.
- MOs are routed to the MO Portal, focusing on department and personnel management.
- Admins are routed to the Admin Portal, taking charge of user management and overall system monitoring.

(5) **Logout**

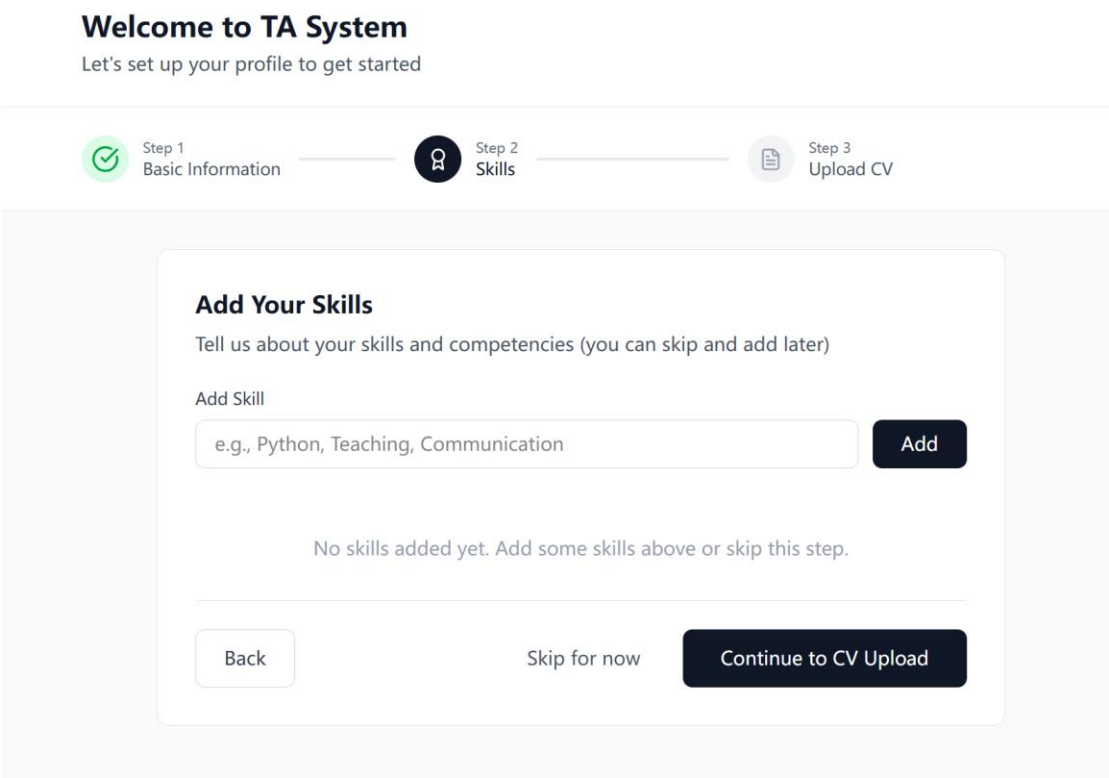
Once tasks are completed, users can log out of their accounts, at which point the system clears the current session to ensure security.

TA Profile Module

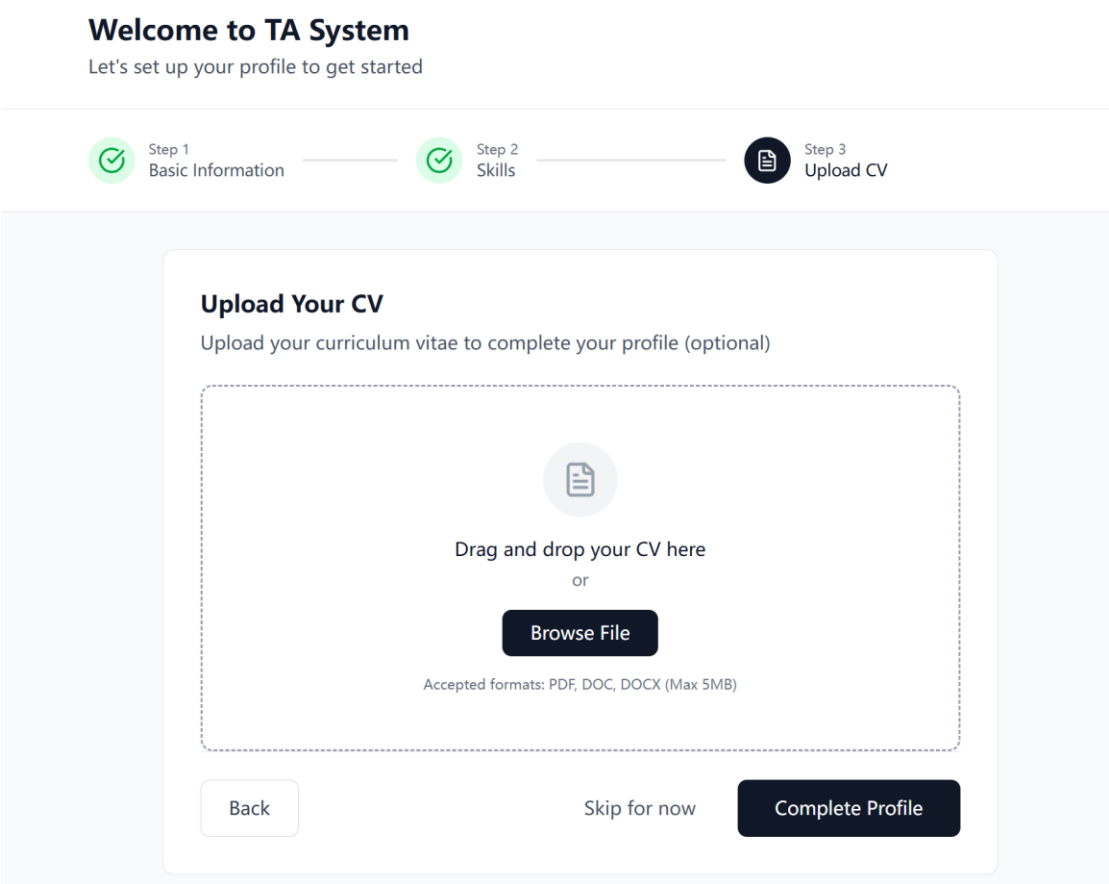
(1) Initial Profile Setup



When the user logs into the system for the first time, the system guides them into the initial setup process for their personal profile. This page serves as the starting point for the entire profile creation workflow, displaying the core basic information required to create a TA profile. In the center of the page, the user needs to enter their full name, student ID, program/major, year, email, and phone number. After confirming the information is correct, the user can click the "Continue to Skills" button at the bottom right of the page to proceed to the next step.

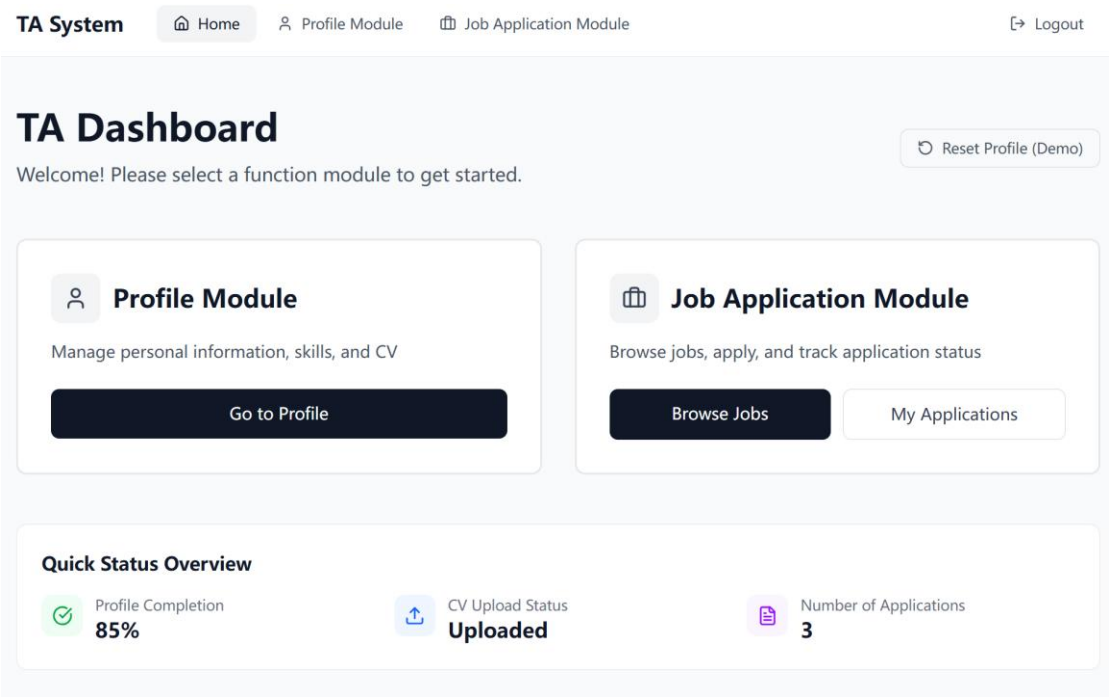


After the user clicks continue on the basic information page, the system enters the "Add Your Skills" page. This page is used to quickly build the user's initial skill profile. On this page, the user can freely input the skills they possess (such as Python, Teaching, Communication, etc.) via a text box and click "Add" to include them. If the user does not wish to fill this out temporarily, they can also click "Skip for now" at the bottom to bypass this step. Once the operation is complete, the user clicks the "Continue to CV Upload" button to transition to the next phase.



The system then enters the "Upload Your CV" page, which is the final step of the initial profile setup. The center of the page provides an upload area where the user can upload a resume file in PDF, DOC, or DOCX format (maximum limit of 5MB) by dragging and dropping or clicking "Browse File". After the upload is complete (or if "Skip for now" is chosen to bypass), the user clicks the "Complete Profile" button at the bottom right. At this point, the system saves all initial data and formally redirects to the TA system's Dashboard Overview page.

（2） Dashboard Overview



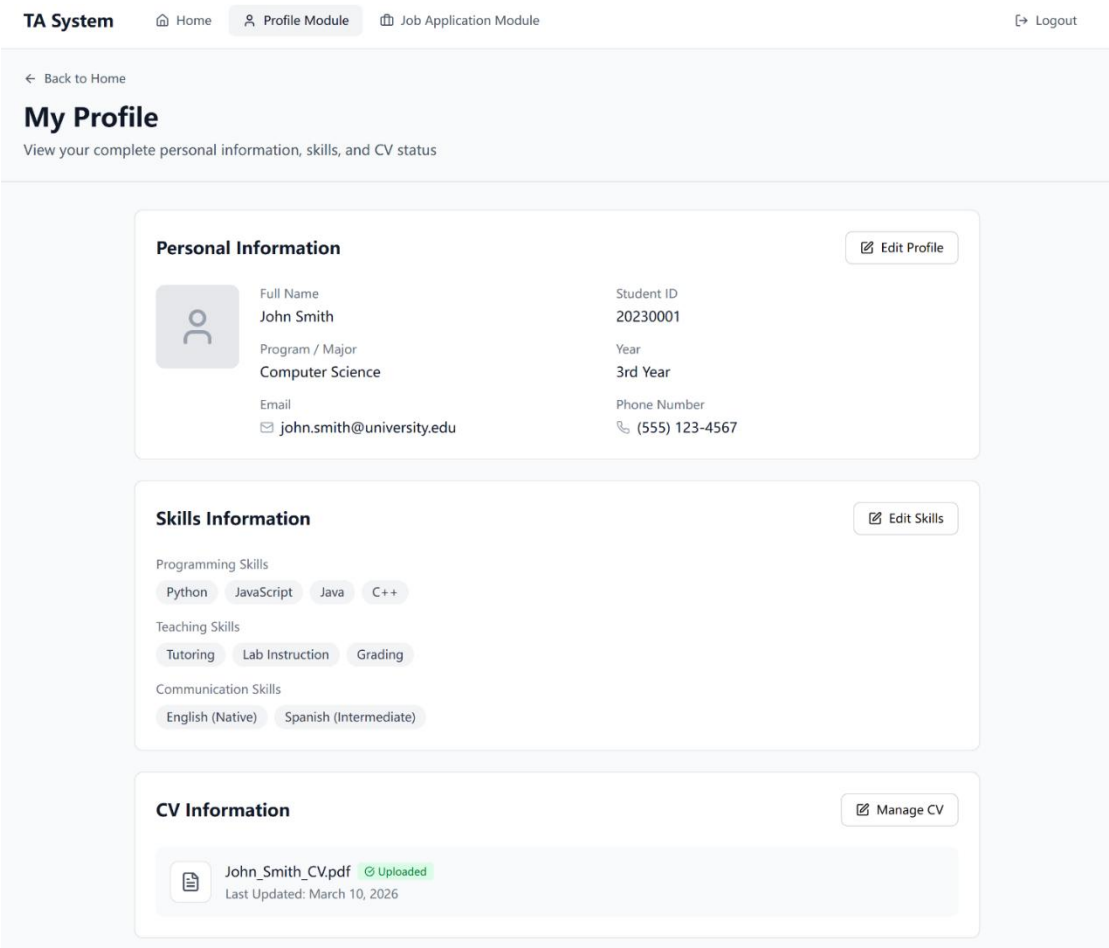
After logging into the system, the user first enters the TA Dashboard, which serves as the starting point of the TA-side workflow.

As the system homepage, it provides access to two major functional modules: the Profile Module and the Job Application Module. For the TA-side process, this page allows the user to determine whether they should first complete their personal preparation or proceed directly to job-related actions.

If the user still needs to manage personal information, skills, or CV materials, they may click Go to Profile to enter the Profile Module and complete the necessary updates.

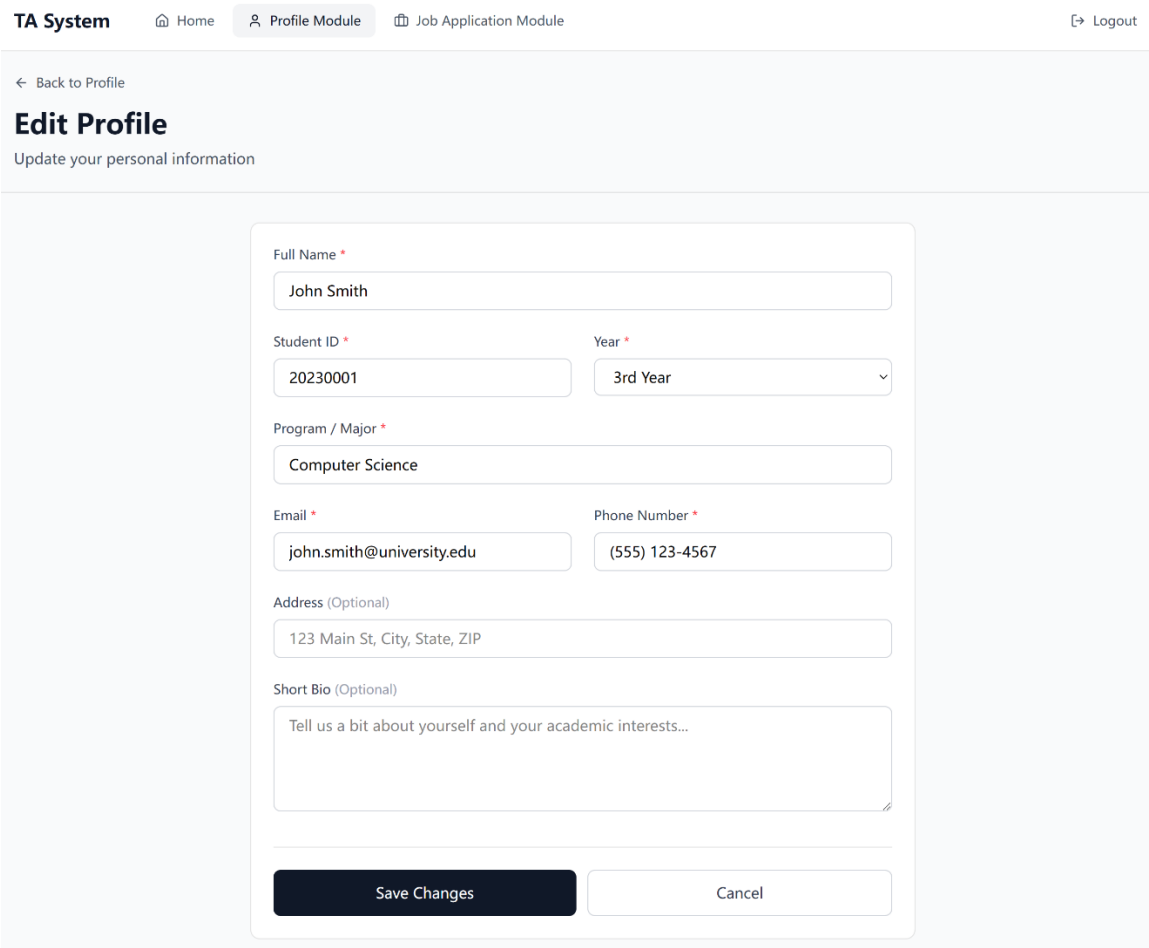
In addition, the Quick Status Overview section displays important readiness indicators, such as profile completion, CV upload status, and the number of applications submitted, enabling the user to quickly understand their current preparation status before entering a specific workflow.

(3) My Profile



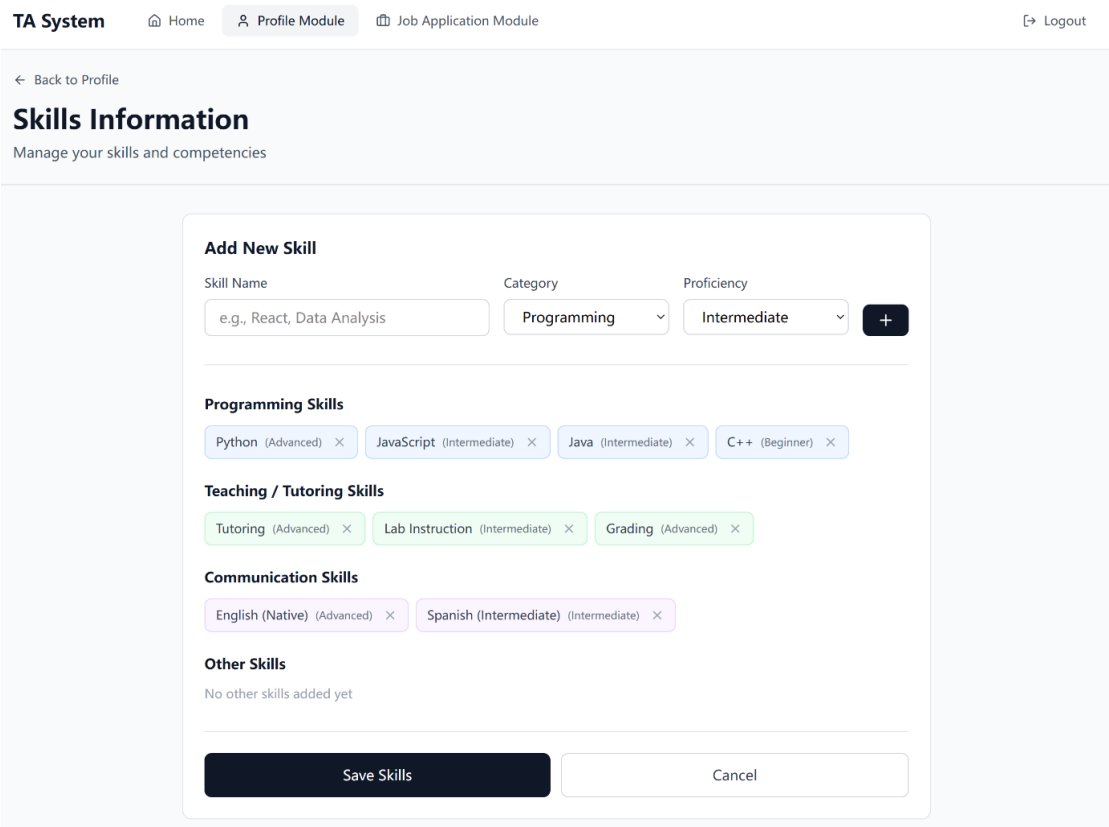
After the user clicks "Go to Profile" on the Dashboard page, the system enters the "My Profile" page. This page displays the user's complete profile information. From top to bottom, the page is divided into three sections: Personal Information, Skills Information, and CV Information, allowing the user to comprehensively review all current attributes and the status of uploaded files. If the user finds that information needs to be supplemented or updated, they can click the "Edit Profile", "Edit Skills", or "Manage CV" buttons located at the top right of the corresponding sections to enter the specific modification workflows. Therefore, the profile detail page serves the roles of information viewing and workflow branching aggregation.

(4) Edit Profile



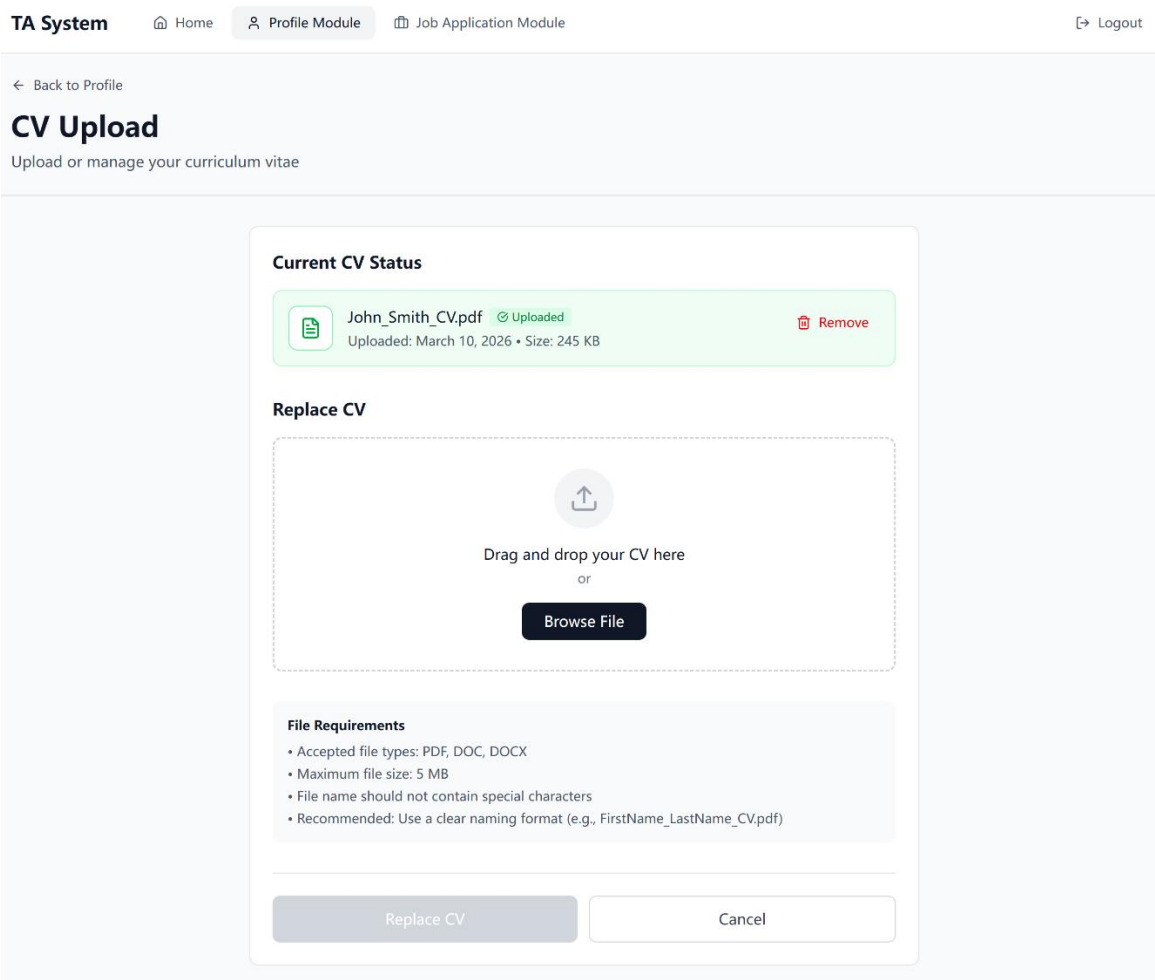
When the user clicks the "Edit Profile" button, the system enters the basic information editing page. This is the core operational page of the profile maintenance workflow. In this form, apart from automatically loading the existing mandatory information, the system also provides additional optional fields, such as Address and Short Bio, to help the user further complete their background description. After filling it out, the user clicks the "Save Changes" button at the bottom, and the system will validate and update the records in the database. If the user decides to abandon the modifications, they can click "Cancel" to leave the current page.

(5) Manage Skills



When the user clicks "Edit Skills" from the detail page, they enter the structured "Skills Information" management page. This page provides a more granular management dimension compared to the initial input. At the top, the user can use dropdown menus to select the Category (e.g., Programming) and Proficiency (e.g., Intermediate) for a new skill. Below this, all saved skills are categorized and displayed as tags; the user can visually review them and click the "X" next to a tag at any time to remove inapplicable items. Once modifications are complete, clicking "Save Skills" synchronizes the updates.

(6) Manage CV

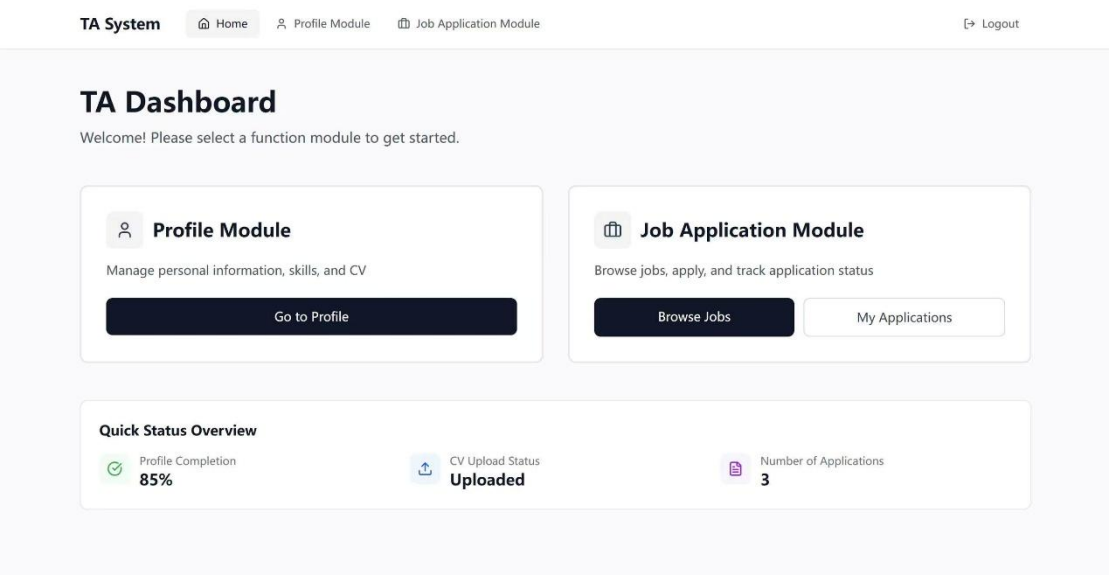


When the user clicks "Manage CV", the system enters the resume version management page. The "Current CV Status" at the top of the page clearly displays the name, upload time, and size of the currently saved file, and provides a one-click "Remove" function. In the "Replace CV" area below, the user can upload a new resume file to overwrite the old version, ensuring that the latest resume is always invoked in the subsequent job application module. After confirming it is correct, clicking the "Replace CV" button saves the changes.

At this point, the TA-side profile module completes a full closed loop from initial creation and status overview to detailed maintenance.

TA Job Application module

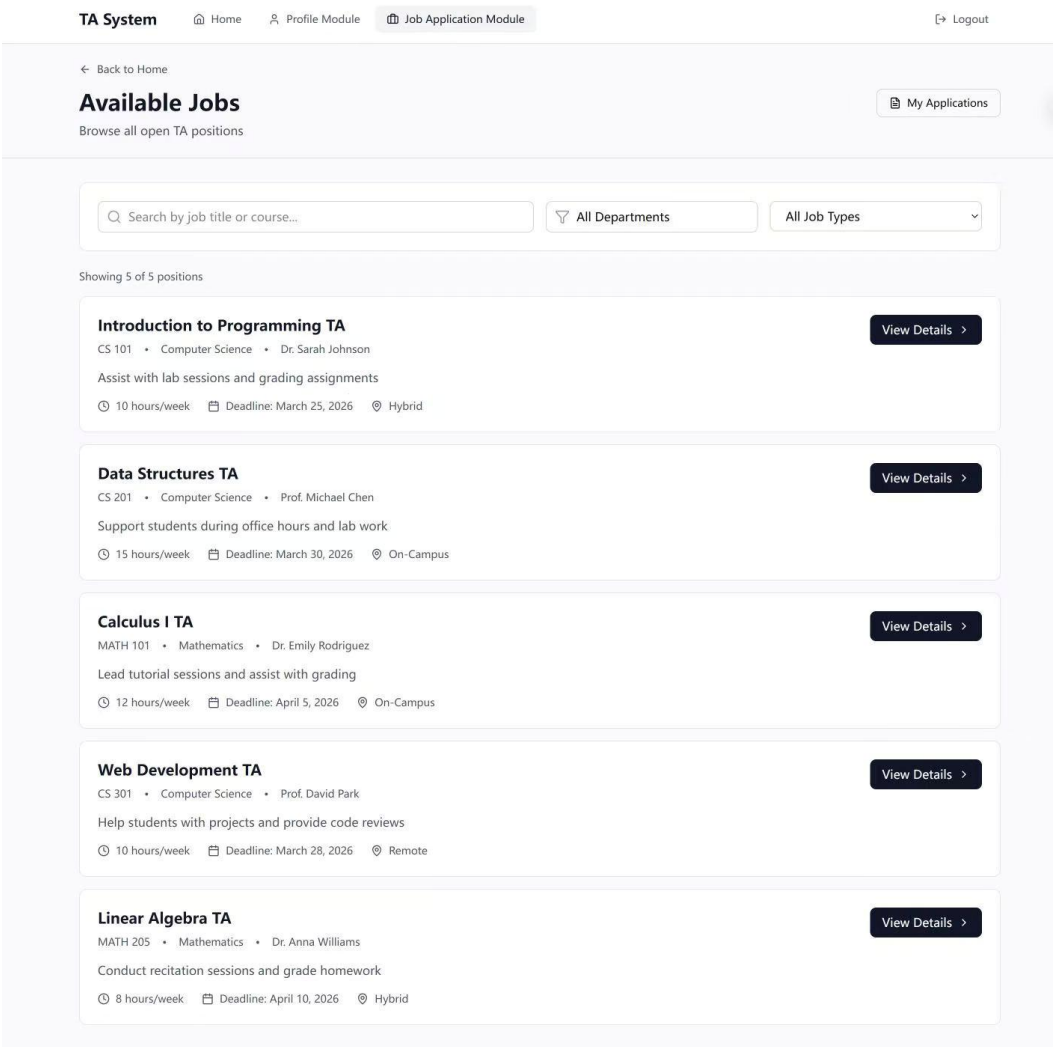
(1) Dashboard



At the same time, the dashboard also supports entry into the Job Application workflow. Once the user has confirmed that their profile information is sufficiently complete, they may proceed through the Job Application Module to continue the application process. By selecting Browse Jobs, the user enters the job list page to browse currently open TA positions. If they want to track existing submissions instead, they may choose My Applications to directly access previously submitted applications.

In this way, the dashboard not only serves as the initial entry point to profile preparation, but also as the transition node that leads into the formal job application process.

(2) Available Jobs



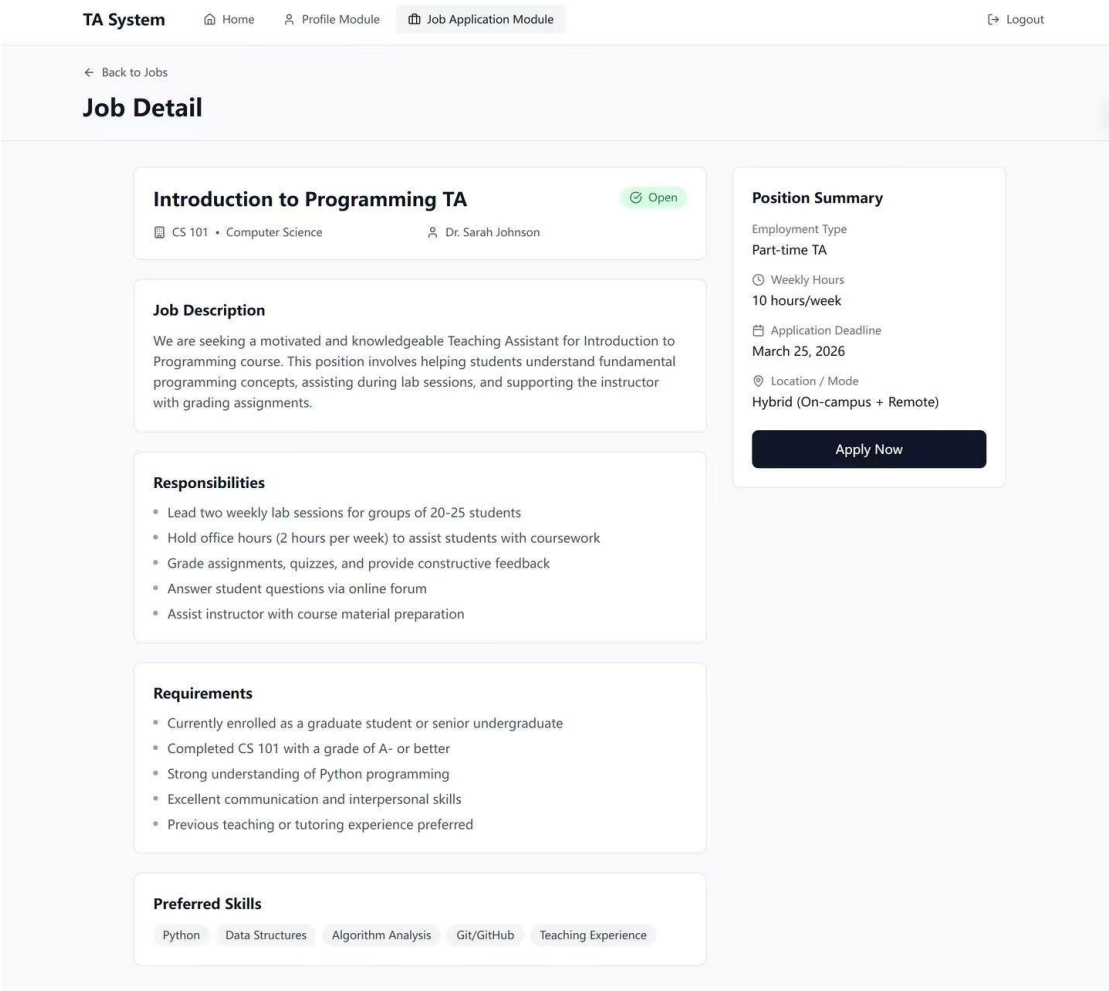
When the user clicks the Browse Jobs button on the Dashboard page, the system enters the Available Jobs page. This page displays all currently open TA positions and functions as the core page for job discovery and filtering.

On this page, the user can enter job titles or course names in the search bar, and may further narrow down the results by department filter and job type filter. The center of the page presents each position as a card, showing summary information such as job title, course code, department, instructor, weekly hours, application deadline, and work mode, which supports preliminary comparison among positions.

Once the user finds a position of interest, they can click the View Details button on the right side of the corresponding job card to enter the job detail page. If the user instead wishes to review previously submitted applications, they may click the My Applications

button at the top right corner to jump directly to the application management page. Therefore, the job list page serves the role of job browsing, filtering, and workflow branching.

(3) Job Detail



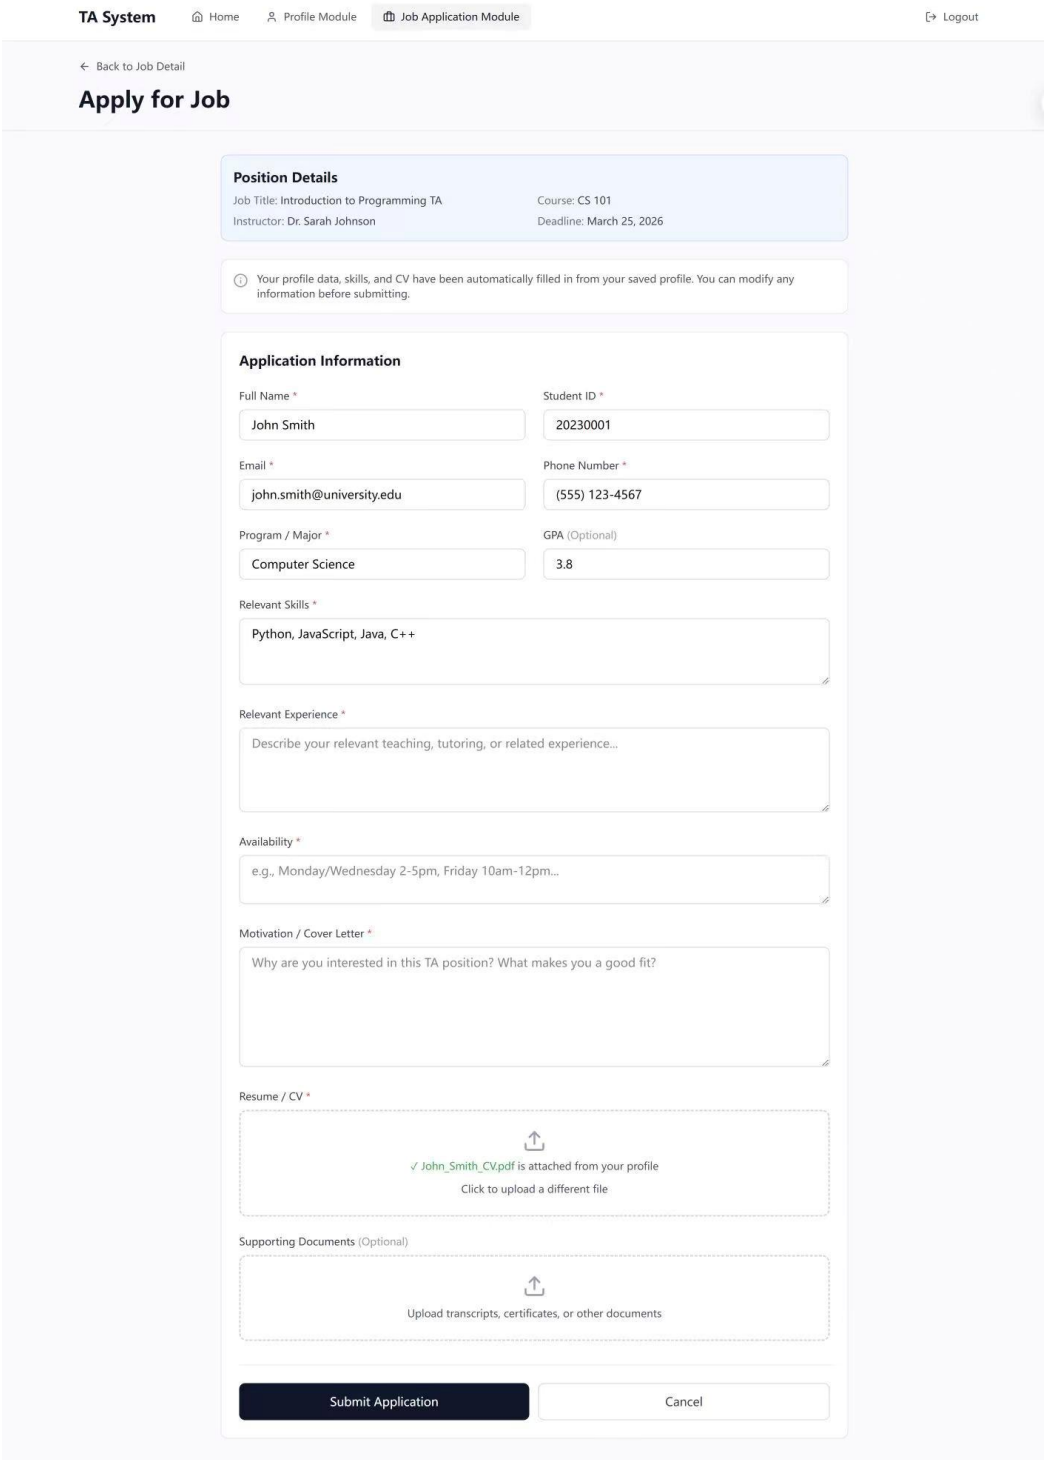
When the user clicks the View Details button for a specific job on the Available Jobs page, the system enters the Job Detail page. This page presents the full information of a specific position and acts as the key decision point where the user determines whether to apply.

On the left side, the page provides detailed information including the job title, course code, department, instructor, and the sections Job Description, Responsibilities, Requirements, and Preferred Skills, allowing the user to fully understand the work

content, eligibility requirements, and preferred competencies. On the right side, the Position Summary highlights important information such as employment type, weekly hours, application deadline, and work mode.

After reviewing the job information, if the user believes that their background matches the requirements, they can click the Apply Now button on the right to proceed to the application form page. If the user decides that the position is not suitable, they can click Back to Jobs at the top left corner to return to the job list page and continue browsing other opportunities. Thus, the job detail page serves as the crucial transition point from job exploration to formal application.

(4) Apply For Job



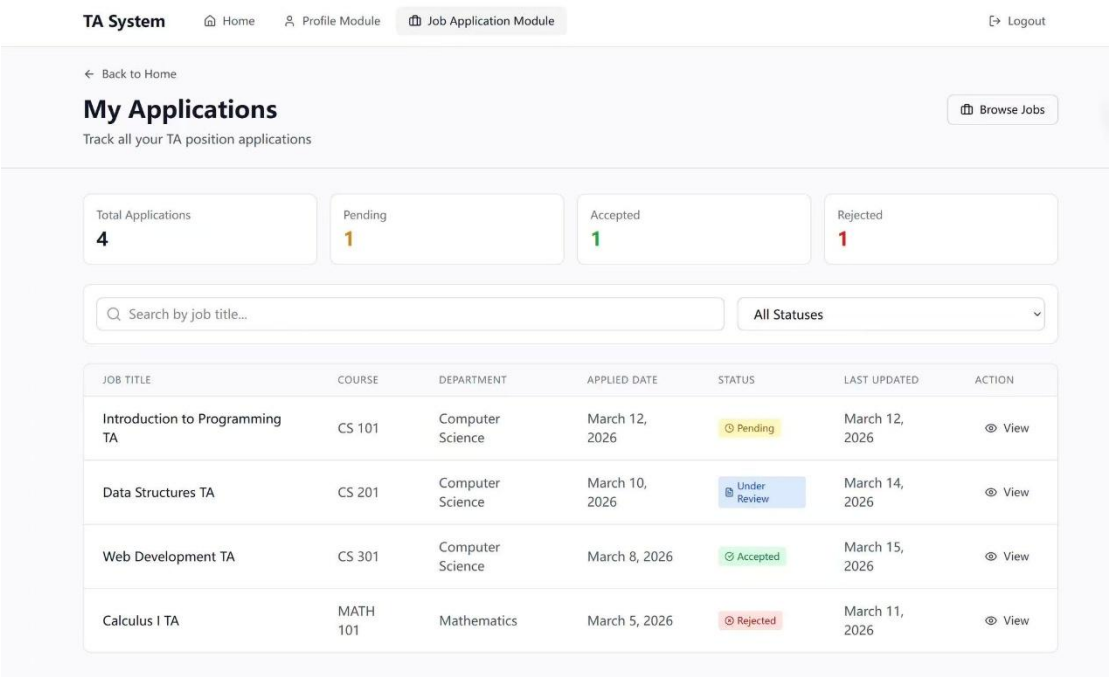
When the user clicks the Apply Now button on the Job Detail page, the system enters the Apply for Job page. This is the core operational page of the application workflow, where the user fills in and submits the formal application information.

At the top of the page, the Position Details section displays the job title, course, instructor, and deadline again, helping the user confirm the target position. In the form

area, part of the basic information has already been automatically filled in from the Profile Module, so the user only needs to verify the content and supplement position-related information such as relevant skills, experience, availability, and motivation. In addition, the page supports uploading a CV and optional supporting documents.

After completing the form, the user clicks the Submit Application button at the bottom of the page. The system then validates the information, saves the application record, and initializes the application status. If the user does not wish to continue, they may click Cancel to abandon the current operation and leave the page. This page completes the most critical step in the workflow, transforming job interest into a formal submission.

(5) My Applications



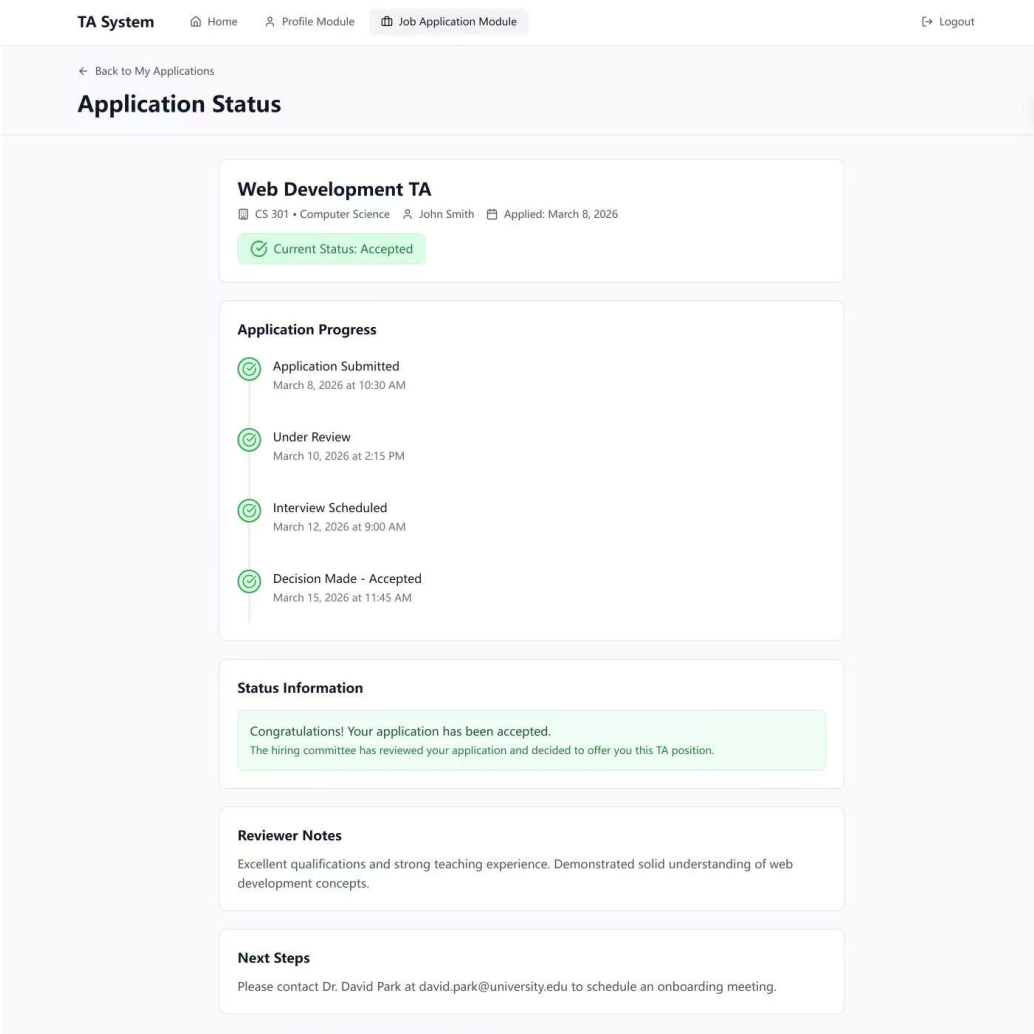
After the user successfully clicks Submit Application, the system creates a new application record and includes it in the My Applications page for centralized management. The user may also actively enter this page by clicking My Applications from either the Dashboard or the job list page.

At the top, summary cards display the total number of applications and the number under different statuses such as Pending, Accepted, and Rejected, helping the user

quickly understand the overall application situation. The table below lists each application's job title, course, department, applied date, current status, and last updated time, allowing the user to clearly review the progress of every submission.

If the user wants to check the detailed processing history of a specific application, they can click the View button on the far right of the corresponding row to enter the application status detail page. Therefore, the My Applications page serves to receive the result of submission, centralize application management, and connect to the next stage of status tracking.

(6) Application Status



When the user clicks the View button on the right side of a specific application record on the My Applications page, the system enters the Application Status page. This page displays the full processing history of a single application and serves as the final key

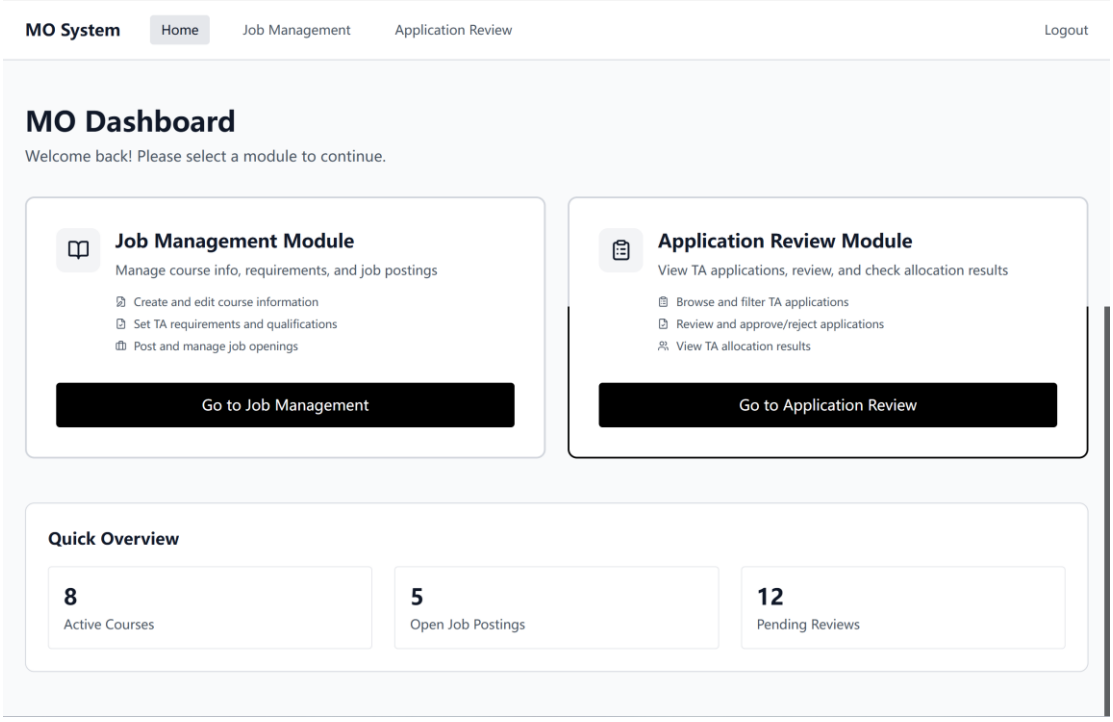
page in the workflow.

At the top, the page shows the job title, course code, applicant, application date, and current status, allowing the user to quickly recognize the current outcome. In the middle, the Application Progress section visualizes the full process from Application Submitted to Under Review, Interview Scheduled, and finally the decision result, thereby improving transparency.

At the bottom of the page, the system further uses Status Information to provide the formal decision, Reviewer Notes to show evaluation comments, and Next Steps to guide the user on follow-up actions. For example, when the application result is Accepted, the page instructs the user to contact the relevant instructor for onboarding arrangements. At this point, the TA-side job application workflow completes a full closed loop from job browsing and application submission to result feedback.

MO Job Management Module

（1） MO Dashboard

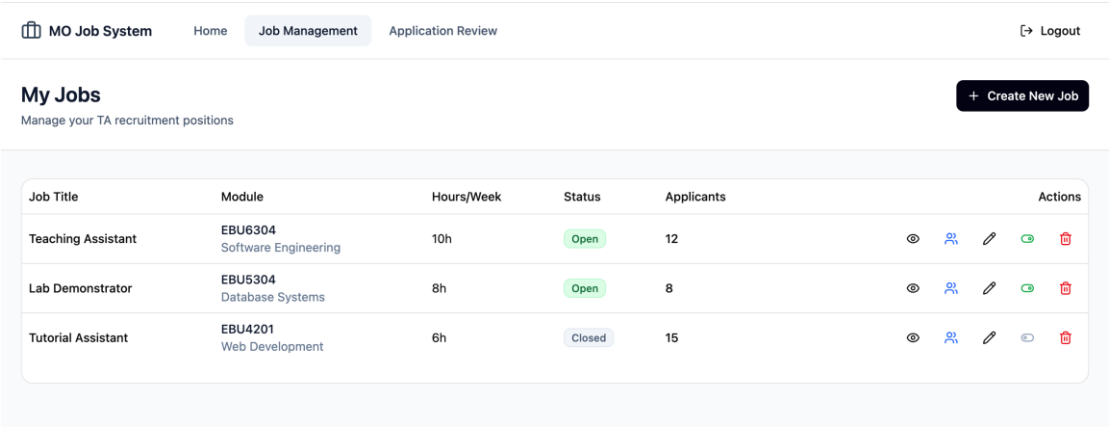


Upon logging into the system, the MO first enters the MO Dashboard, which serves as the starting point of the MO-side workflow. As the system homepage, it provides the MO with access to the two major functional modules: Job Management Module and Application Review Module.

For the Job Management workflow, this page functions as the initial entry point. If the MO needs to manage recruitment-related settings, such as course information, TA requirements, qualifications, and job postings, they may click Go to Job Management to proceed to the corresponding management pages.

In addition, the Quick Overview section displays key operational metrics, such as the numbers of active courses, open job postings, and pending reviews, allowing the MO to quickly understand the current status of recruitment-related tasks before entering a specific workflow.

(2) My Jobs



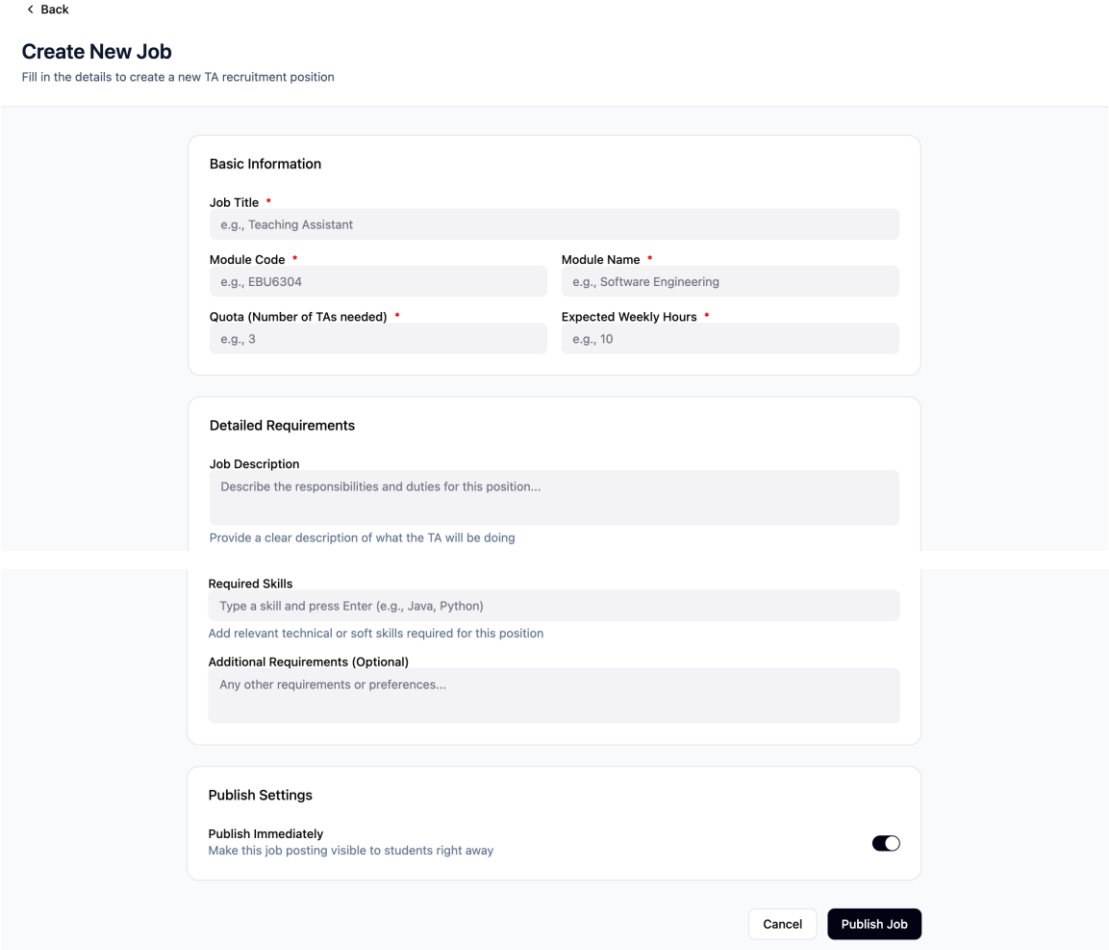
The "My Jobs" page serves as the centralized control panel for all TA recruitment positions within the system. To initiate a new recruitment cycle, the Module Organiser (MO) can click the prominent "+ Create New Job" button located at the top right.

The main interface features a clean, structured data table that displays key metrics for each posting: Job Title, Module, Hours/Week, current Status (such as Open or Closed), and the total number of Applicants.

For efficient job lifecycle management, the far-right "Actions" column provides a suite of five quick-access icons for each row. From left to right, these icons allow the MO to instantly perform the following key actions:

- **View Job Details (Eye icon):** Review the full description and requirements of the posting.
- **View Allocated TAs (User Group icon):** Instantly access the contact list of hired candidates for that specific module.
- **Edit Job (Pencil icon):** Modify the job posting details and parameters.
- **Toggle Status (Switch icon):** Seamlessly change the job's visibility status between open and closed.
- **Delete Job (Red Trash Bin icon):** Permanently remove the recruitment record from the system.

(3) Create New Job

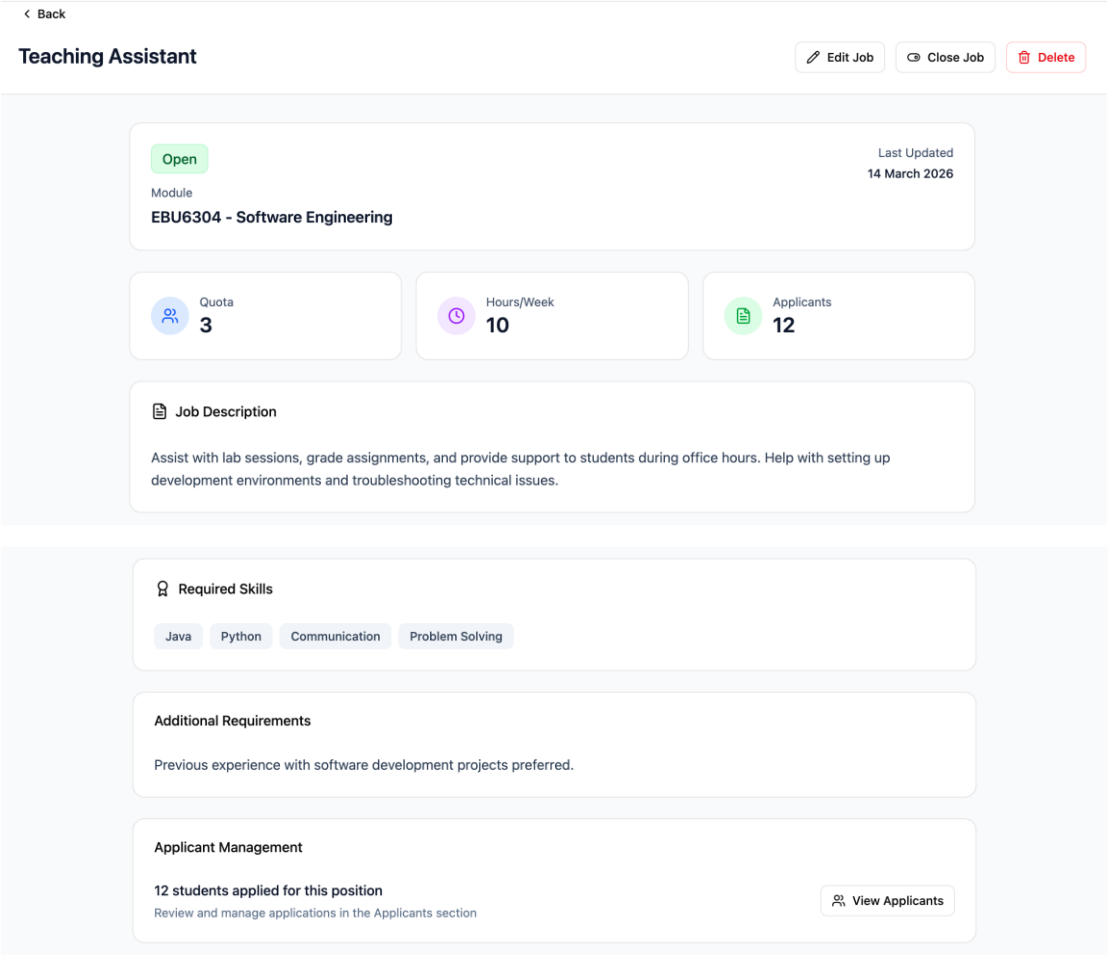


The "Create New Job" page is the primary interface for publishing recruitment needs. To ensure data quality, the form is divided into three distinct sections:

- Basic Information: This section captures mandatory fields (marked with an asterisk). The MO must input the Job Title, Module Code, Module Name, Quota, and Expected Weekly Hours. This structured data is crucial for filtering on the student side.
- Detailed Requirements: Here, the MO provides the qualitative context. It includes a free-text field for the Job Description and a "Required Skills" input where typing a skill and hitting Enter generates a distinct tag. An optional field is also available for additional preferences.
- Publish Settings: A simple "Publish Immediately" toggle allows the MO to control visibility. Turning it on pushes the job live to the TA system; turning it off saves it as a draft.

Clicking "Publish Job" validates the form, commits the new record to the backend system, and redirects the MO back to the Job Management dashboard.

(4)Job Detail

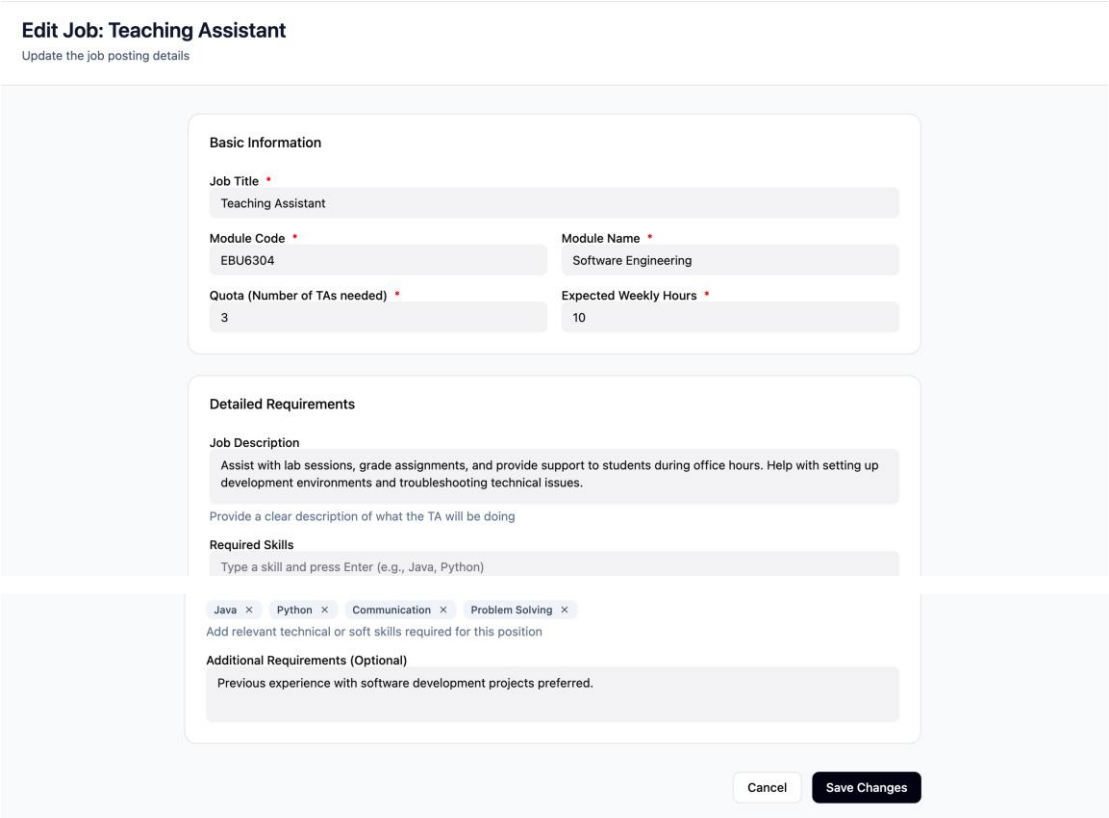


The MO accesses the "Job Detail" page by clicking the "Eye" icon on a job record in the "My Jobs" list. This page displays the complete information of a specific job posting in a read-only format.

The top section shows the Job Title and provides action buttons to Edit Job, Close Job, and Delete the posting. Directly below, data cards display key metrics: the current Status, Module details, Quota, Hours/Week, and the number of Applicants.

The middle section lists the Job Description, Required Skills (displayed as tags such as Java and Python), and Additional Requirements. At the bottom of the page, the "Applicant Management" section shows the total number of applications received and includes a "View Applicants" button. Clicking this button redirects the user to the Application Review module.

(5)Edit Job

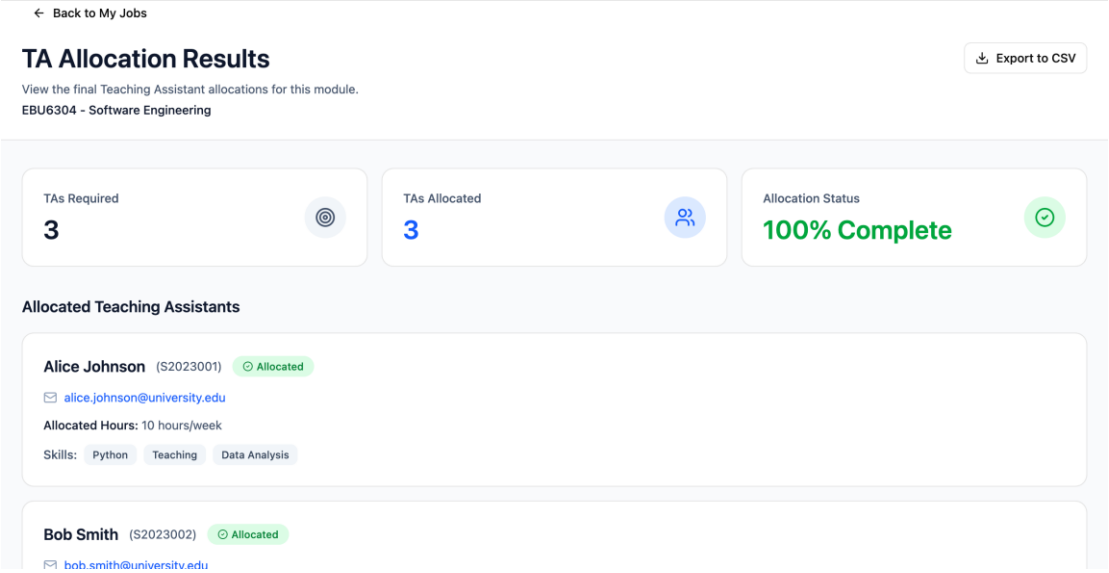


The MO accesses the "Edit Job" page by clicking the pencil icon in the job list or the edit button on the job detail page. This page allows users to update the details of an existing job posting. The form layout is identical to the creation page, but all input fields are pre-filled with the current data of the selected job.

In the "Basic Information" section, the MO can modify mandatory fields such as the Job Title, Module Code, Quota, and Expected Weekly Hours. The "Detailed Requirements" section allows updates to the Job Description, Required Skills, and Additional Requirements. The Required Skills are displayed as tags with an "x" icon, allowing users to directly remove existing skills or add new ones.

At the bottom of the page, the user can click the "Save Changes" button to apply the updates to the system, or click the "Cancel" button to discard any modifications and return to the previous screen.

(6) TA Allocation Results



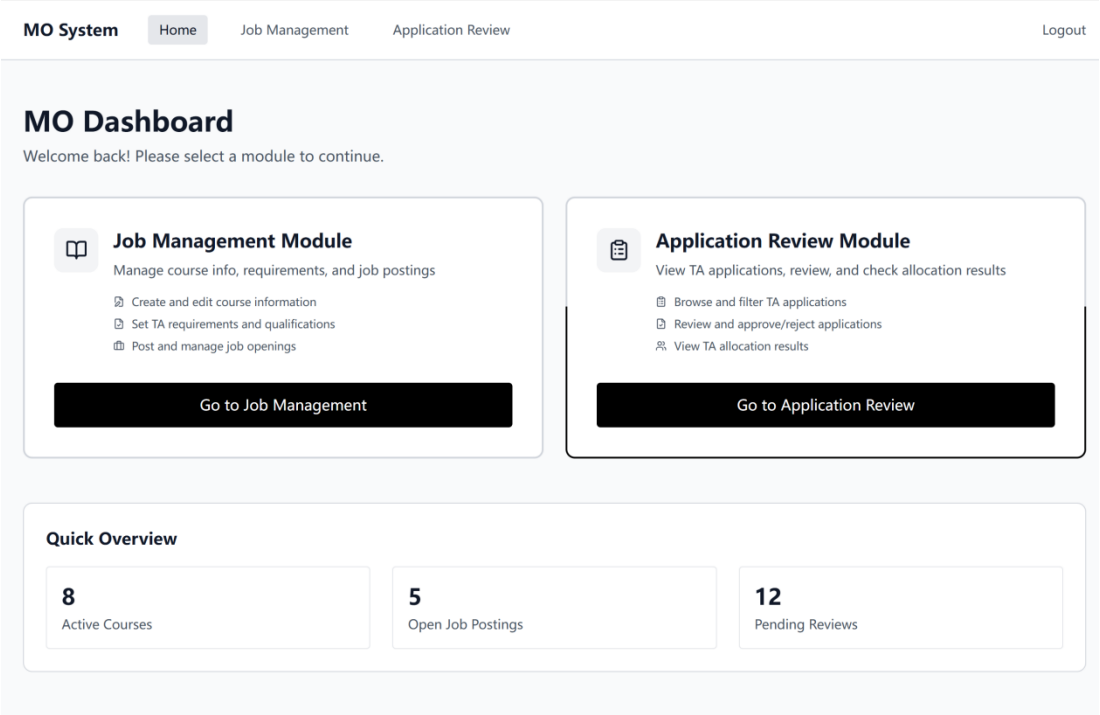
The MO accesses the "TA Allocation Results" page by clicking the "People" icon on a job record in the "My Jobs" list. This page displays the final list of hired TAs for a specific module.

The header shows the module details and includes an "Export to CSV" button at the top right. Below the header, three data cards summarize the recruitment progress: TAs Required, TAs Allocated, and the overall Allocation Status (e.g., 100% Complete).

The main section lists the Allocated Teaching Assistants. Each record provides the TA's name, student ID, an "Allocated" status badge, contact email, allocated working hours, and relevant skill tags (e.g., Python, Teaching).

Application Review Module

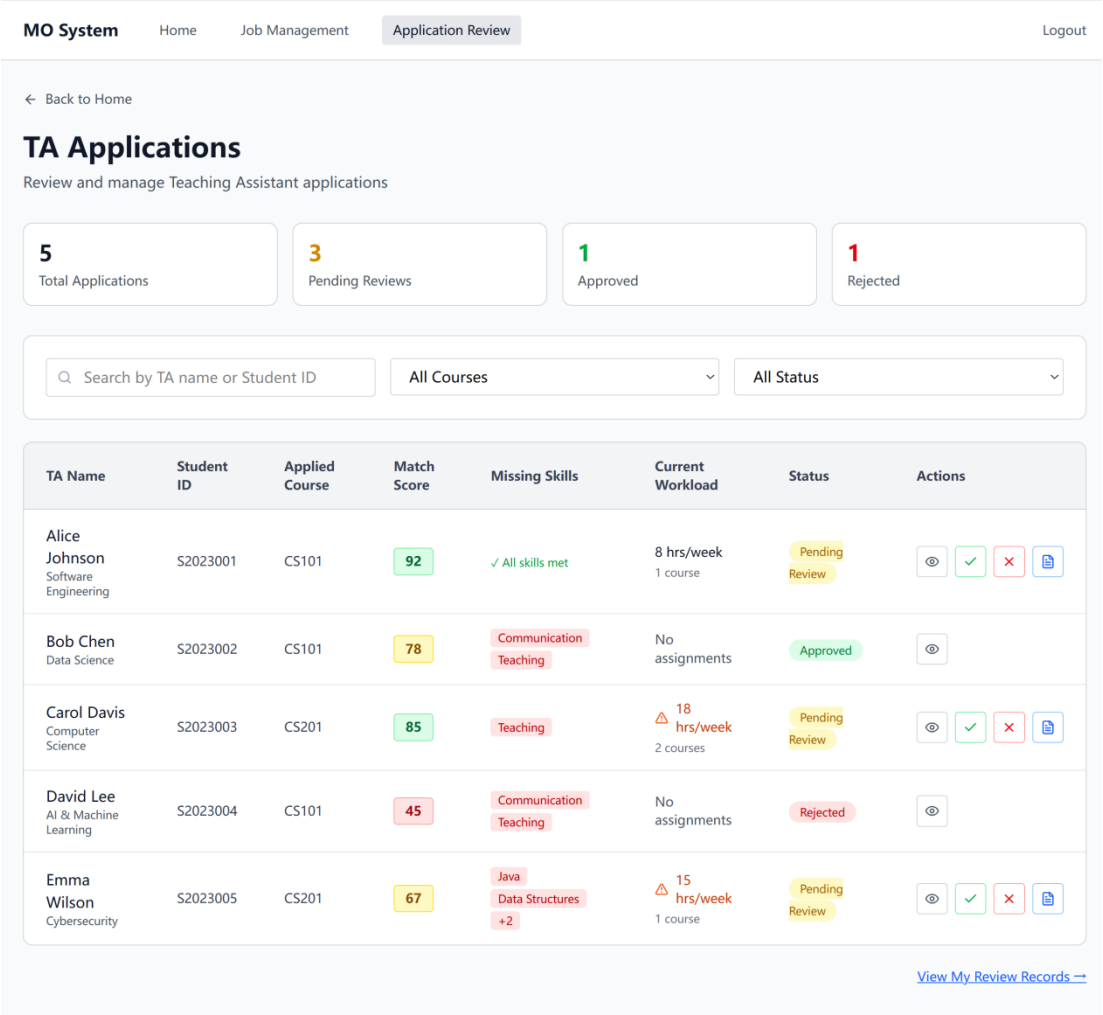
（1）MO Dashboard



At the same time, the dashboard also supports entry into the Application Review workflow.

If the MO's current task is to process submitted TA applications rather than manage job settings, they may click Go to Application Review to enter the TA Applications page. In this way, the dashboard serves not only as the entry point to the Job Management workflow, but also as the transition node that leads into the application review process.

（2）TA Applications



When the user clicks Go to Application Review on the MO Dashboard page, the system enters the TA Applications page.

This page functions as the core page for browsing, filtering, and quickly processing TA applications. At the top of the page, summary statistics display the total number of applications, as well as the numbers of pending, approved, and rejected applications, helping the user quickly understand the overall review situation.

The page also provides search and filtering functions, allowing users to search by TA name or student ID, search by course, and filter by application status such as All, Under Review, Approved, and Rejected.

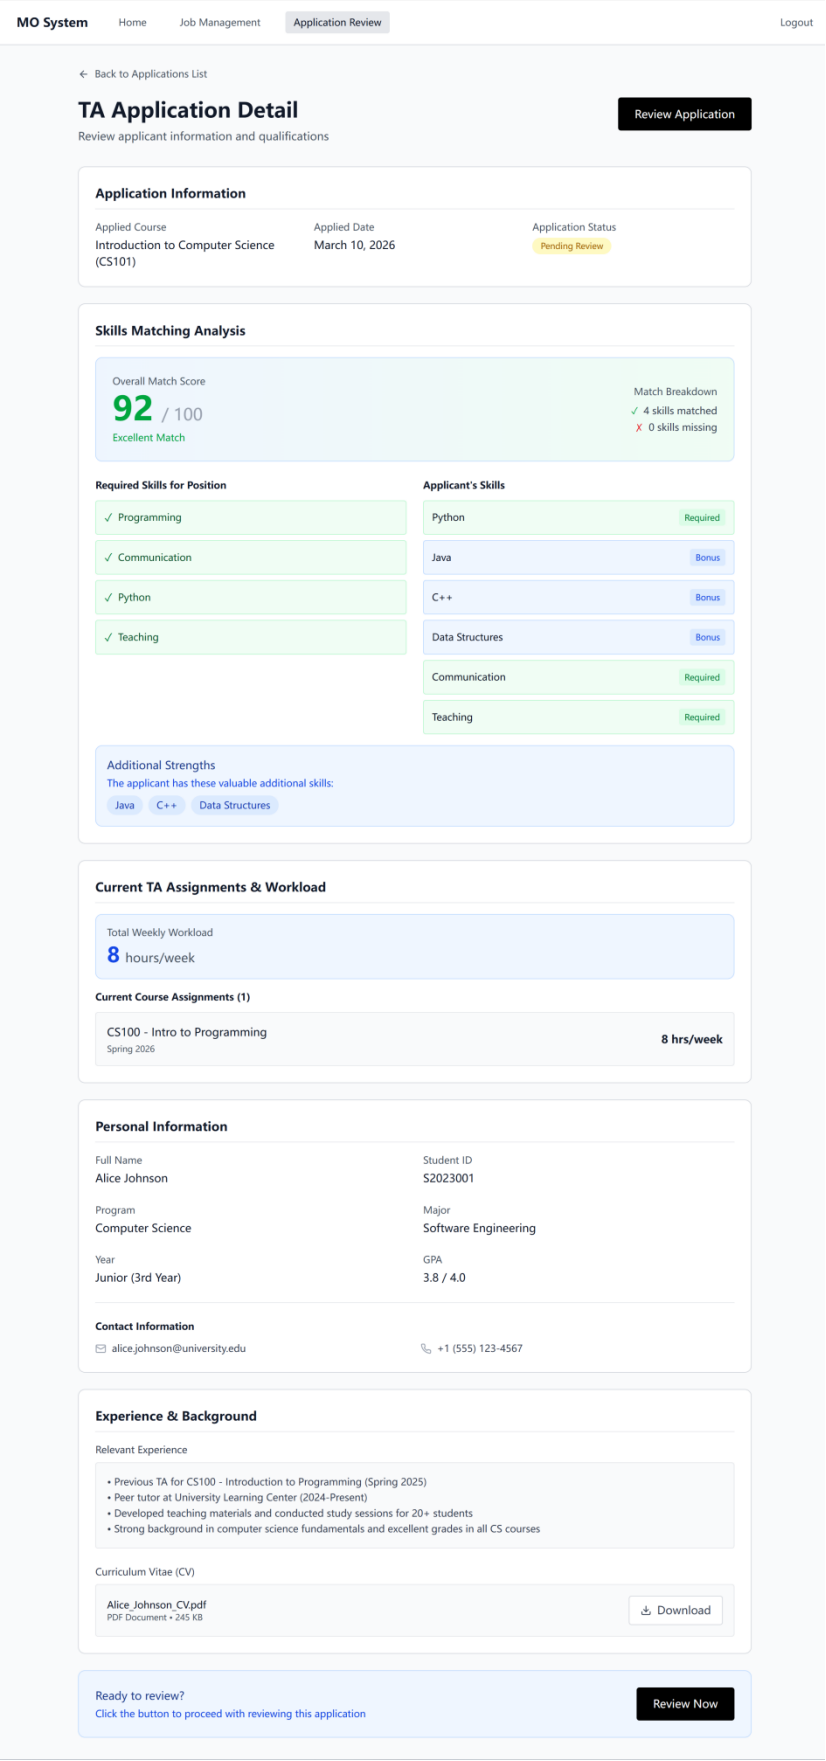
In the main application list, each record presents key review information, including TA Name, Student ID, and Applied Courses.

In addition, the system displays a Match Score from 1 to 100 with color-coded

indicators, a Missing Skills field highlighting unmet requirements, and a Current Workload section showing the applicant's weekly workload hours and assigned course count. Workload values also visually indicate whether the applicant has no assignments, is within a normal range, or may face overload risk. Each application also shows its current status, such as Pending Review, Approved, or Rejected.

Once the user identifies a specific application, they may click View Application Details, Quick approve, Quick reject, or Full application review to continue the workflow. If the user wants to check historical review outcomes instead, they may click View My Review Records in the lower-right corner.

（3）TA Application Detail



When the user clicks View Application Details on the TA Applications page, the system enters the TA Application Detail page.

This page presents the full information of a specific application and acts as the key decision-support page where the Module Organizer evaluates whether the applicant is suitable for the position.

At the top of the page, the Application Information section shows the applied course, application date, and current status, allowing the user to quickly recognize the context of the application.

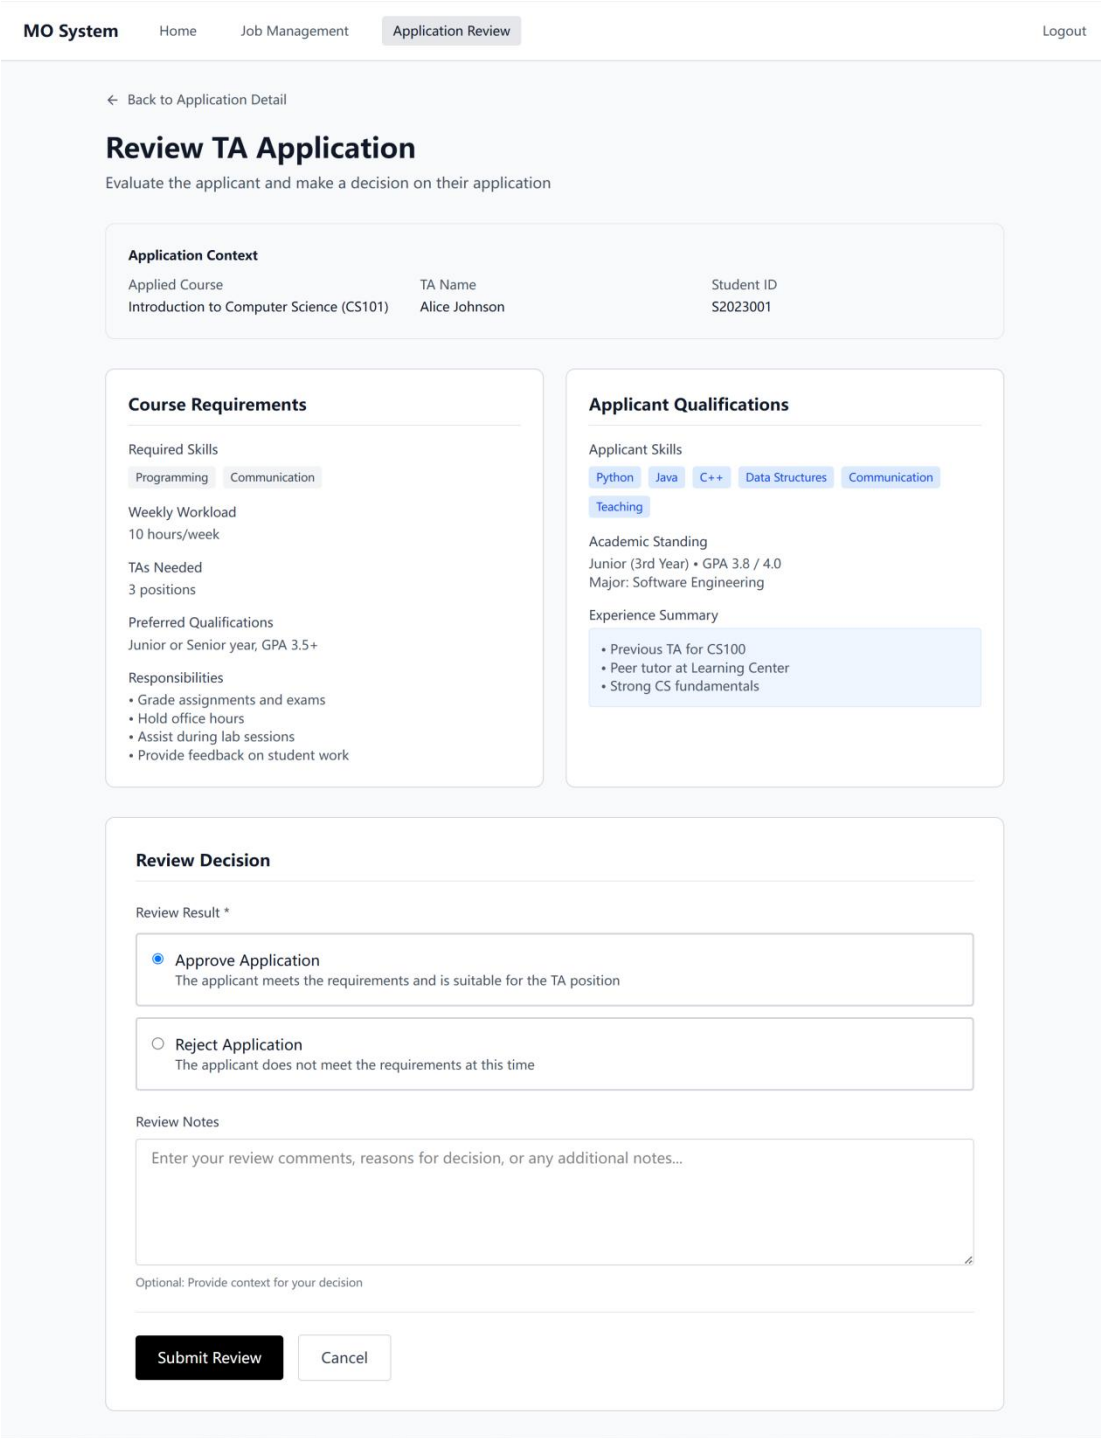
The page then provides a detailed Skills Matching Analysis, including the applicant's overall match score, a matching evaluation, and a side-by-side comparison between position required skills and applicant skills. Required skills that are satisfied are marked in green, while missing skills are marked in red. The page also uses a red warning box to highlight missing skills and a blue prompt box to show the applicant's additional strengths.

In addition, the page includes Current TA Assignments & Workload, which shows the applicant's total weekly workload, current course assignments, and workload conflict warnings when the total hours reach or exceed the threshold. If the applicant currently has no course assignments, the page displays an empty-state prompt.

The lower part of the page further provides Personal Information, such as name, student ID, major, GPA, and contact details, as well as Experience & Background, including relevant teaching or TA experience and a CV download portal.

After reviewing the information, the user may click Review Application in the upper-right corner or Review Now at the bottom of the page to proceed to the formal review page.

（4）Review TA Application



When the user clicks Review Application or Review Now on the TA Application Detail page, the system enters the Review TA Application page. This is the core operational page of the MO-side review workflow, where the user completes the formal review decision and records the result.

At the top of the page, the Application Context section displays the requested course,

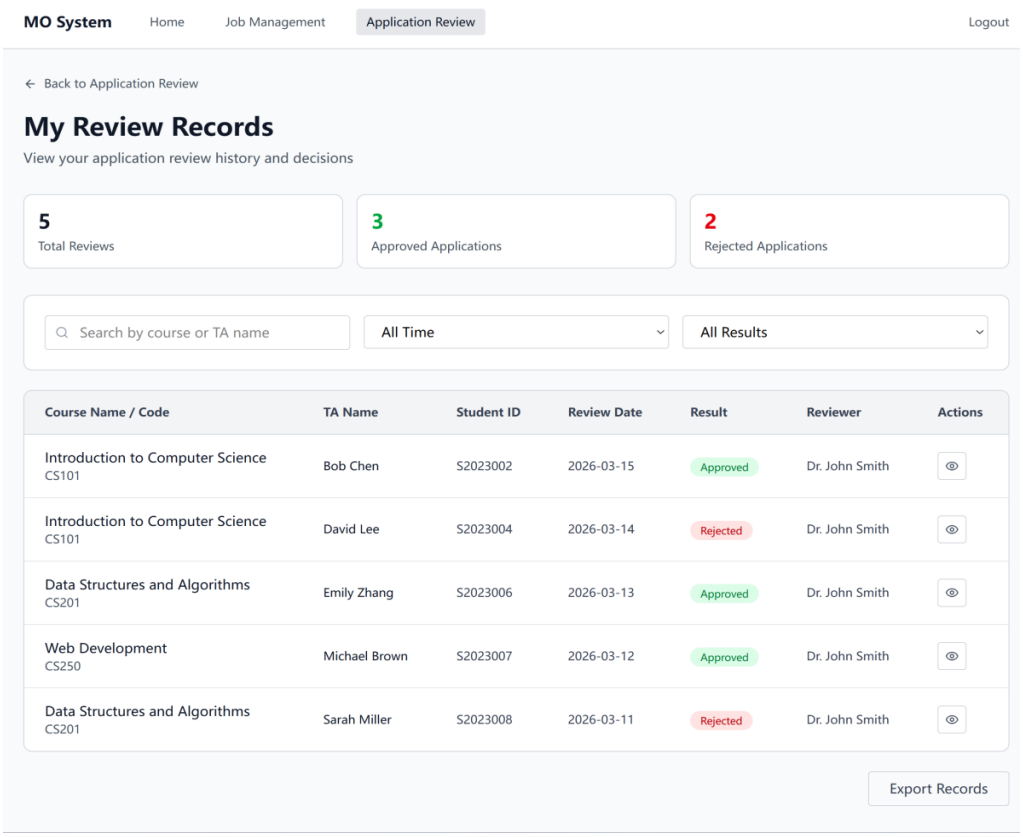
TA name, and student ID, helping the reviewer confirm the target application before making a decision.

In the main comparison area, the page presents Course Requirements VS Applicant Qualifications. The left side lists course requirements such as required skills, weekly workload, number of TAs needed, preferred qualifications, and job responsibilities, while the right side summarizes the applicant's skills, academic standing, and experience. This side-by-side structure supports a direct comparison between job needs and applicant background.

After reviewing the information, the user may choose a Review Decision by selecting either Approve Application or Reject Application, and then enter the reason or comments in the Review Notes field.

Once the decision is finalized, the user clicks Submit Review to complete the review and update the application status in the system. If the user decides not to continue, they may click Cancel to abandon the current action and return to the previous page.

（5）My Review Records



After a review decision is submitted, the result can be traced in the My Review Records page. The user may also actively enter this page by clicking View My Review Records from the TA Applications page. Therefore, this page serves as the centralized destination for historical review management and statistics.

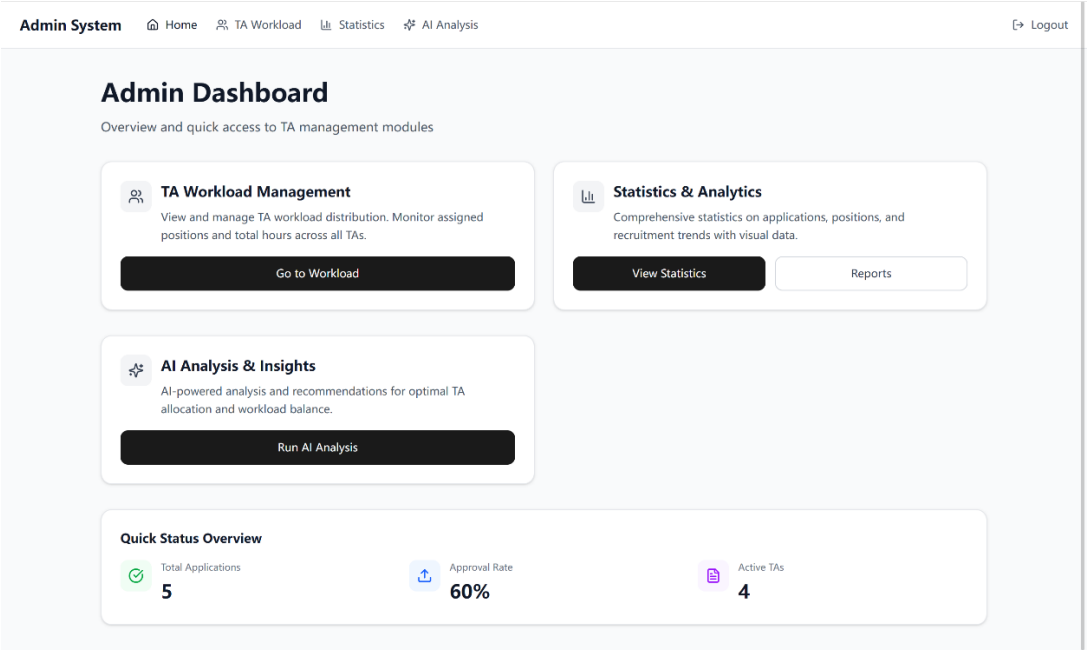
At the top, summary statistics display the total number of reviews, the number of approved cases, and the number of rejected cases, helping the user quickly understand their overall review history. The page also provides filtering and search functions, allowing users to search by course, TA name, time range, or review status, so that specific records can be located efficiently.

In the record list, each row shows key review information including Course Name/Code, TA Name, Student ID, Review Date, Result, and Reviewer. If the user wants to check the details of a particular reviewed case, they may click View Application Details to open the corresponding application detail again.

In addition, the page provides an Export Records function in the lower-right corner, allowing all review records to be exported as files for archiving or further processing. Thus, the My Review Records page serves as the final management and tracking page in the MO-side application review workflow, completing a closed loop from application review to result retention and later retrieval.

Admin System Management Module

(1) Admin Dashboard



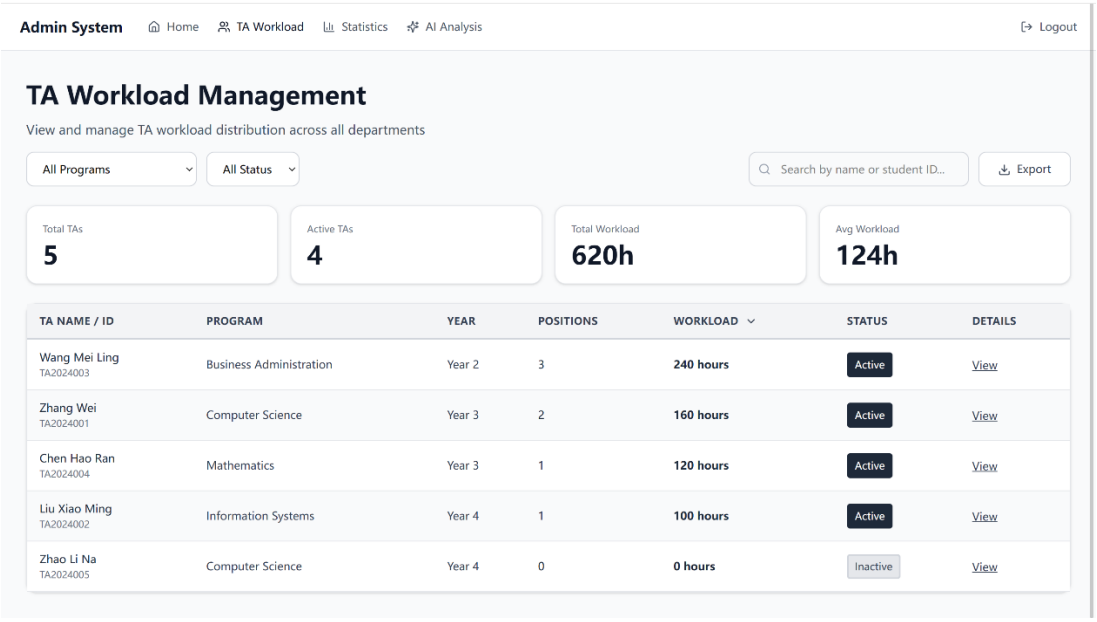
After logging into the system, the administrator is directly directed to the **Admin Dashboard**, the homepage of this module. The system automatically performs three key tasks:

It fetches all basic data from the database in one go, including job postings, TA application records, and TA personal profiles.

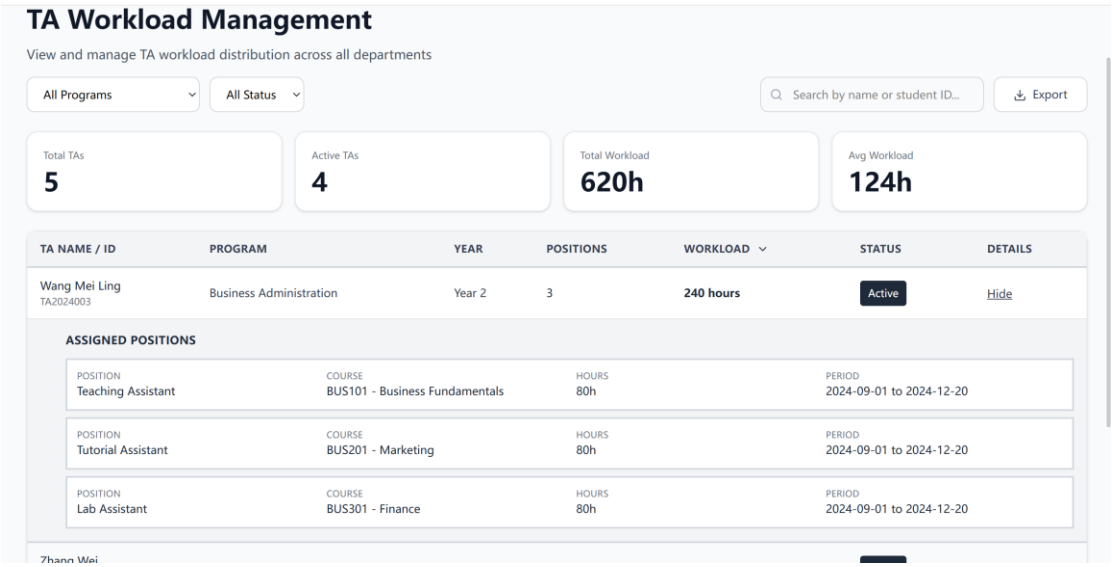
It pre-calculates core statistical results, such as the total number of TAs, total job openings, recruitment completion rate, and the approximate workload of each TA.

It presents these data through concise cards and charts on the dashboard, allowing the administrator to grasp the overall system status at a glance and navigate directly to more detailed views.

(2) Checking TA Workload



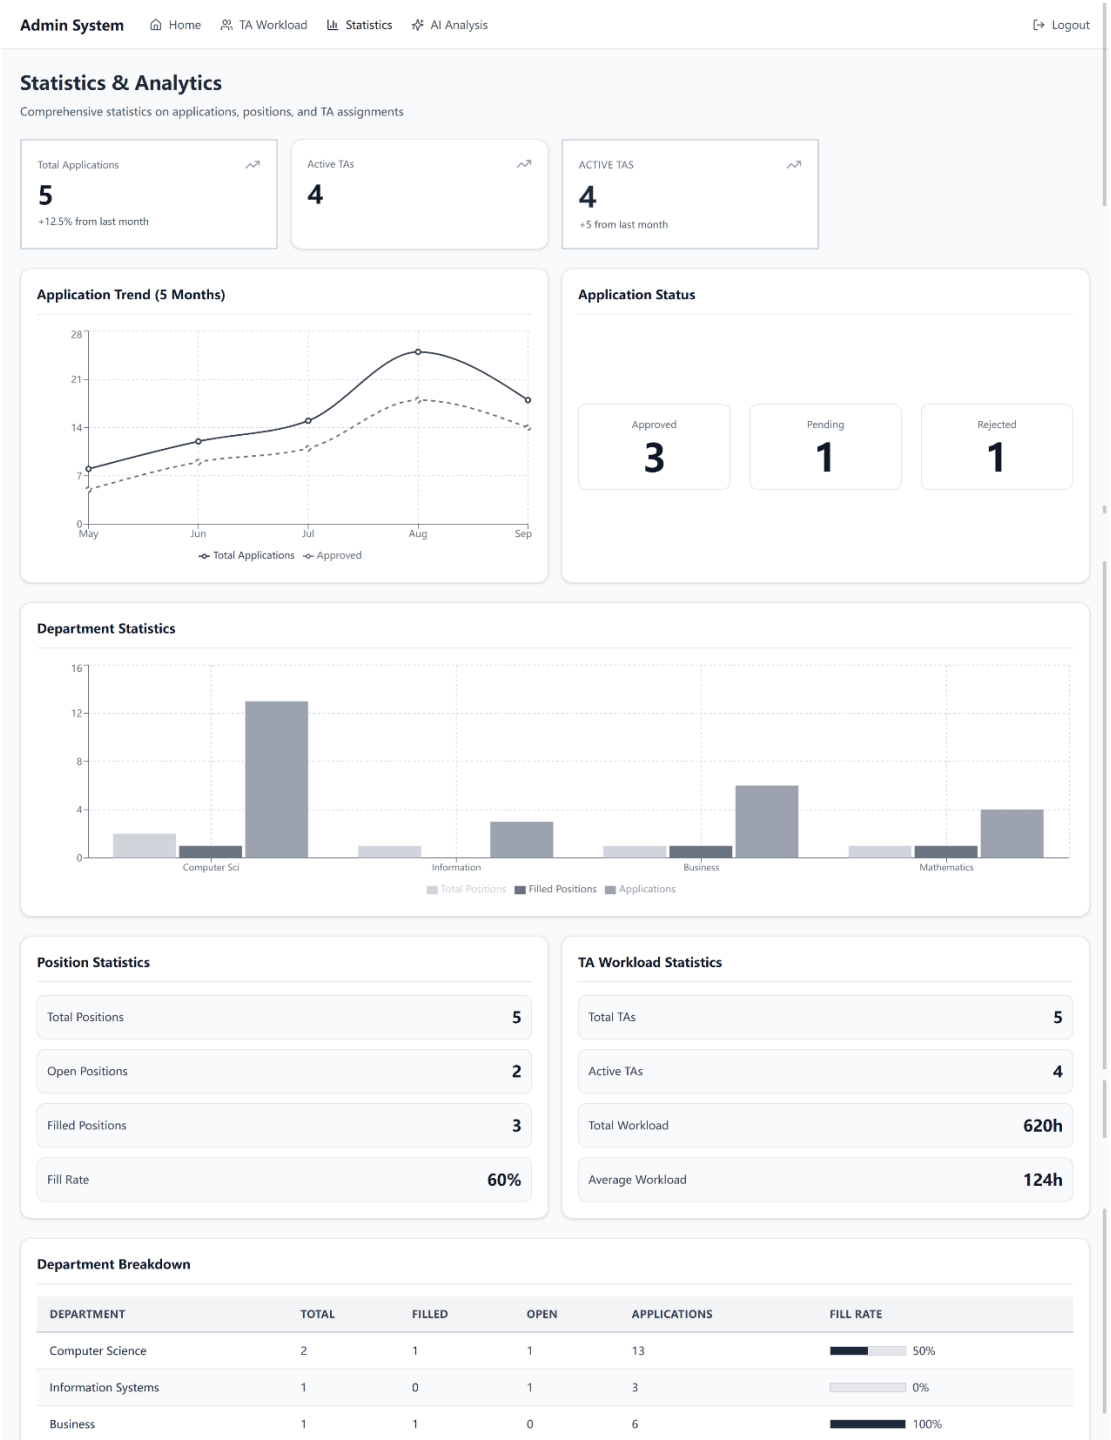
When the administrator needs to understand the exact workload assigned to each TA, they can click to enter the **TA Workload Page** from the dashboard.



The system reorganizes the data based on TA names, affiliated departments, and time periods. It compiles a clear breakdown of each TA's assigned job count, processed applications, and task completion status, then displays this information in structured lists and visual charts. The administrator can use filtering tools to quickly locate specific TAs, clearly identifying who is overloaded or underutilized, and use

this insight to adjust job allocations accordingly.

(3) Reviewing Job Allocation and Overall Data



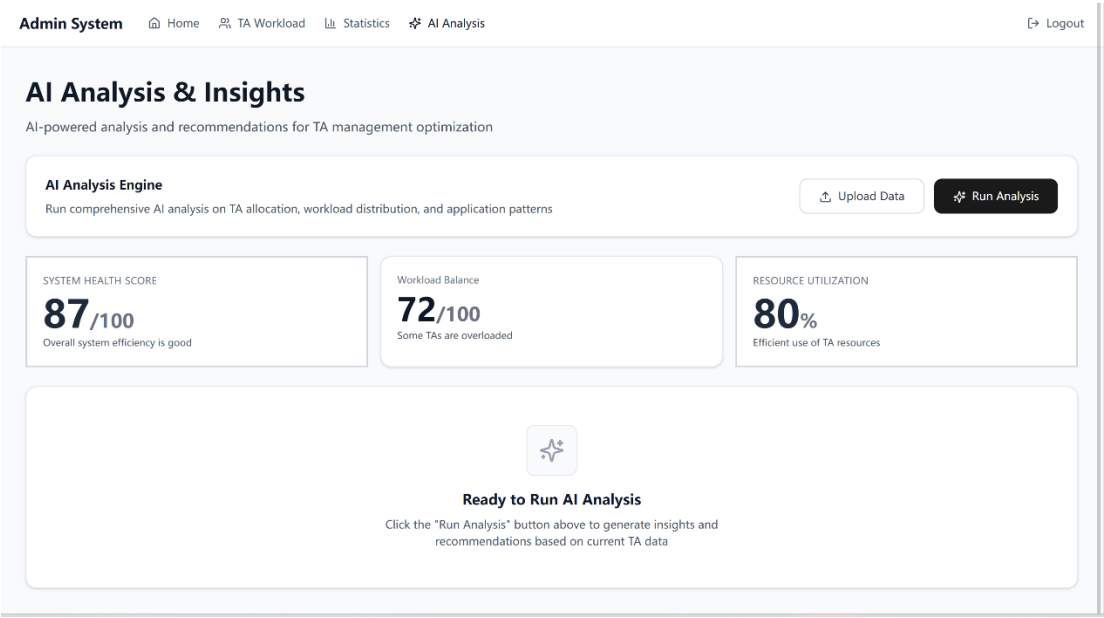
If the administrator wants to focus on job allocation and the overall recruitment progress, they can navigate to the **Statistics Page** from the dashboard.

The system presents data in two distinct dimensions:

Job Allocation Statistics: It calculates the required headcount for each position, the number of TAs already assigned, recruitment gaps, and the distribution of jobs across departments, clearly illustrating whether job allocation is balanced.

Overall Recruitment Data: It tracks the full recruitment lifecycle from job posting to resume receipt, interviews, offer issuance, and onboarding. It also calculates conversion rates at each stage, helping the administrator identify bottlenecks, inefficiencies, and areas that require additional resources.

(4) Reviewing Job AI Expansion Process



This module has pre-built entry points for AI analysis, which will simplify operations once the corresponding features are launched:

The administrator clicks the corresponding function button on the **AI Analysis Entry Page**. The system automatically attaches the current filtering criteria (such as time range, department, or TA name) to call the AI interface. Once the AI analysis is completed, the results are displayed directly on the page, including TA skill matching scores, suitable job recommendations, and workload optimization suggestions. The administrator can directly apply these insights to adjust job allocations or TA work arrangements, making management more efficient.
